About / Disclaimer

This report is published under the **ZAFTYS Analytics** brand. All quantitative statements are intended to be grounded in a pinned Data Bank version. Gaps are disclosed rather than invented. Modeled series are decision support - not audited financial statements. Scenario bands, sensitivity ranges, and qualitative frameworks are labeled where evidence is incomplete. External publisher forecasts outside the study horizon are contextual only.

How to read this report

- **Exhibits** sit with captions and sources on the same page where possible.
- **Tables** use navy headers and teal accent rules for scanability.
- **Claims** are bank-grounded; unverified numbers are withheld.
- **Confidential** - authorized recipients only.

Bank 48b3c6da-a6af-410a-921b-bff1fbd20334 · v1
Horizon 2017-2026 history · forecast to 2036 · 2026-08-13

Evidence standard

Numeric claims prefer bank-verified sources. Where coverage is thin, the report states the gap instead of inventing precision.

Model spine

Market size, share, scenario, and sensitivity exhibits bind to the pinned model version for this bank.

Distribution

Prepared for authorized institutional recipients. Redistribution requires ZAFTYS Analytics approval.

0.1 Executive Summary

Executive Summary - Global Logistics Market. This ZAFTYS institutional report covers North America, Europe, Asia Pacific, Rest of World for 2017-2036, drawing on the Data Bank and 259 drafted sections. Modeled market size rises from 1823.2 to 11344.7 USD billion over 2017-2036 at a base-case CAGR of 10.1%. All statistics in subsequent chapters prefer the canonical model spine; publisher forecasts outside the horizon are cited as external context only. [1]

Key Takeaways: [1]

MACRO GSCPI: 1.25 (Monthly Index) · 2026-06-01

Federal Reserve Bank of St. Louis

Global Logistics Market Incremental Growth Bridge (2017→2036)

KEY VISUAL TAKEAWAYS

- ▶ Road Freight... leads the modeled mix at USD 5,176.4 BN.
- ▶ Modeled size expands from 1823.2 to 11344.7 USD billion (2017→2036).
- ▶ Road Freight (FTL, LTL, Express) contributes the largest incremental bridge at ~5176.4 billion.
- ▶ Bridge allocates total growth by offering shares (priors when evidence is thin).

Source: ZAFTYS model spine · offering drivers · native Typst (CeTZ waterfall)

1. Market size is modeled at 4334.30 USD billion in 2026, reaching 11344.68 USD billion by 2036. [1]
2. Base-case CAGR is 10.1% over 2026-2036. [1]
3. Asia Pacific accounts for the largest regional share at 35.0% in the base year. [1]

4. By offering, Road Freight (FTL, LTL, Express) leads with 14.3% share in the base year. [1]
5. By technology, Road Freight Fleet leads with 45.0% share in the base year. [1]
6. By business function, Retail & E-commerce leads with 34.0% share in the base year. [1]

Exhibit ES-1 - Market size by year:

Market size spine - USD billion

Year	Base case (USD billion)
2017	1,823.2
2018	2,007.3
2019	2,210.1
2020	2,433.3
2021	2,679.1
2022	2,949.6
2023	3,794.4
2024	3,931.8
2025	4,109.1

0.2 Premium Insights

STRATEGIC IMPLICATIONS: Premium Insights matters for how Global Logistics Market spend is contracted and delivered across the study horizon. Decision makers should move from this Premium Insights framing into share, size, and geographic diligence for Global Logistics Market. [1]

See Figure 1, Figure 10, Figure 13, Table 5, Figure 18, Table 5.

Global Logistics Market Attractive Opportunities

#	Insight
1.0	Overall market CAGR of 10.1% across the forecast horizon.
2.0	Largest technology cut: Road Freight Fleet at 45.0% share.
3.0	Largest offering cut: Road Freight (FTL, LTL, Express) at 14.3% share.
4.0	Largest business function cut: Retail & E-commerce at 34.0% share.
5.0	Largest region cut: Asia Pacific at 35.0% share.

Source: Premium Insights · ZAFTYS

Global Logistics Market Cross-Cut Growth Highlights

USD bn · Technology · Source: ZAFTYS model frames

0.2.1 Attractive Opportunities

Opportunity themes in Global Logistics Market highlight where verified demand signals exceed current competitive coverage in the bank. Attractive Opportunities is developed from named sources and the study model for this market, aligned to the canonical quantitative spine where sizing applies. [1]

See Figure 1, Figure 10, Figure 13, Table 5, Figure 18, Table 5.

0.2.2 Cross-Cut Growth Highlights

Cross-Cut Growth Highlights is developed from named sources and the study model for this market, aligned to the canonical quantitative spine where sizing applies. The discussion of Cross-Cut Growth Highlights stays within the Global Logistics Market study frame (North America, Europe, Asia Pacific, Rest of World; 2017-2036) using named sources and the modeled quantitative spine. [1]

See Figure 1, Figure 10, Figure 13, Table 5, Figure 18, Table 5.

1 Market Introduction

Market Introduction organizes Global Logistics Market for readers covering North America, Europe, Asia Pacific, Rest of World across 2017-2036. Subsections that follow develop definition, competitive posture, segment structure, and geography without repeating raw retrieval dumps. [1]

BACKGROUND: Subsequent pages develop definition, competitive posture, segment structure, and geographic detail for Global Logistics Market, keeping quantitative statements aligned to the canonical model spine where sizing is required. [1]

1.1 Market Definition

BACKGROUND: Market Definition should be diligenced with adjacent cuts of Global Logistics Market, not as an isolated publisher extract. [1]

STRATEGIC IMPLICATIONS: Coverage of Market Definition stays aligned to the Global Logistics Market model spine; qualitative detail deepens only where bank evidence is available. Decision makers should move from this Market Definition framing into share, size, and geographic diligence for Global Logistics Market. [1]

1.2 Market Scope

BACKGROUND: Within Global Logistics Market, Market Scope is read through demand and competitive signals rather than publisher teasers. [1]

STRATEGIC IMPLICATIONS: Evidence density for Market Scope varies; this subsection emphasizes structural role inside Global Logistics Market over anecdote. Decision makers should move from this Market Scope framing into share, size, and geographic diligence for Global Logistics Market. [1]

See Figure 1, Figure 10, Figure 13, Table 4, Table 1.

1.3 Market Segments

BACKGROUND: Market Segments matters for how Global Logistics Market spend is contracted and delivered across the study horizon. [1]

STRATEGIC IMPLICATIONS: Network design and outsourcing choices for Market Segments translate Global Logistics Market growth into operator outcomes. Decision makers should move from this Market Segments framing into share, size, and geographic diligence for Global Logistics Market. [1]

See Figure 17.

Global Logistics Market Segmentation Taxonomy

By Service Offering	Service Offering Detail (L2)	By End-Use Application	By Tech & Fleet
Transportation Services	Road Freight (FTL, LTL, Express)	Retail & E-commerce	Road Freight Fleet
Warehousing & Storage Services	Ocean Freight (FCL, LCL)	Manufacturing & Industrial	Ocean Fleet & Chartering
Freight Forwarding & Customs Brokerage	Air Freight (Express, General Cargo)	Healthcare & Pharmaceuticals	Air Cargo Capacity
Value-Added Logistics Services (VALS)	Rail Freight & Intermodal	Food & Beverages	Rail & Intermodal
	Ambient Warehousing	Oil, Gas & Chemicals	EV Vans & Green Fleet
	Temperature-Controlled / Cold Storage		Autonomous Freight Pilots
	ASRS / Automated Nodes		WMS / TMS Software Stack
	Air & Ocean Freight Management		
	Customs Clearance & Port Handling		
	Multimodal Transport Orchestration		

Source: ZAFTYS taxonomy pack · L1/L2 segmentation tree

1.4 Key Market Players

BACKGROUND: Evidence density for Key Market Players varies; this subsection emphasizes structural role inside Global Logistics Market over anecdote. [2]

1.5 Report Key Benefits

BACKGROUND: Within Global Logistics Market, Report Key Benefits is read through demand and competitive signals rather than publisher teasers. [1]

STRATEGIC IMPLICATIONS: Evidence density for Report Key Benefits varies; this subsection emphasizes structural role inside Global Logistics Market over anecdote. Decision makers should move from this Report Key Benefits framing into share, size, and geographic diligence for Global Logistics Market. [1]

2 Research Methodology

Research methodology for Global Logistics Market combines live source retrieval, claim verification, hybrid market modeling spanning 2017-2036, and a primary interview census for qualitative triangulation. [1]

PRIMARY RESEARCH DISCLOSURE: The study design targets a primary interview census of approximately n=45 across the logistics value chain (Shippers / asset owners ~30%, 3PL / contract logistics ~35%, Carriers ~20%, Regulators / agencies ~15%), with regional coverage across North America, Europe, Asia-Pacific, and Rest of World. Blind and open responses are mixed. Findings inform methodology mix charts and qualitative triangulation; they do not replace the modeled size spine. [1]

Named secondary and institutional sources used for triangulation include IATA (air cargo / FTK), IMO and FMC (maritime rules and US trade-lane oversight), World Bank LPI, UN Comtrade, OECD ITF, EU ETS maritime / CBAM, ICAO, and US Census TSI. Commercial rate context (e.g. Drewry) is treated as secondary and labeled where used. [1]

See Figure 14, Figure 71, Figure 68, Figure 11, Figure 1, Figure 10.

2.1 Research Process

BACKGROUND: Within Global Logistics Market, Research Process is read through demand and competitive signals rather than publisher teasers. [1]

STRATEGIC IMPLICATIONS: Evidence density for Research Process varies; this subsection emphasizes structural role inside Global Logistics Market over anecdote.

Decision makers should move from this Research Process framing into share, size, and geographic diligence for Global Logistics Market. [1]

See Figure 1, Figure 10, Figure 13, Figure 82, Figure 83, Figure 81.

2.2 Market Estimations and Trend Analysis

Market estimations for Global Logistics Market prefer the canonical year series over ad-hoc publisher splices across 2017-2036. [1]

EVIDENCE LINEAGE: Global Logistics Market modeled base is USD 4,334.30 billion (2026), compounding to USD 11,344.68 billion (2036). Construction: hybrid top-down spine plus bottom-up segment/region frames. Confidence: Medium. Supporting: 21. Narrative cites named institutional sources (IATA, IMO, FMC, LPI, UN Comtrade) where applicable; sizing exhibits remain bound to the ZAFTYS model spine. [1]

See Figure 71, Figure 68, Figure 1, Figure 10, Figure 13, Figure 85.

Global Logistics Market Scenario Fan (base / up / down)

Source: ZAFTYS Data Bank model / verified claims.

2.3 Research Approach and Evidence Mix

For Research Methodology, operating conditions are reflected in: The study design targets a primary interview census of approximately n=45 across the logistics value chain (Shippers / asset owners ~30%, 3PL / contract logistics ~35%, Carriers ~20%, Regulators / agencies ~15%), with regional coverage across North America, Europe, Asia-Pacific, and Rest of World. Blind and open responses are mixed. Findings inform methodology mix charts and qualitative triangulation; they do not replace the modeled size spine.

Evidence density for Research Methodology varies; this subsection emphasizes structural role over anecdote.

Methodology mix charts for Global Logistics Market summarize the primary census by value-chain tier, respondent designation, and region. [1]

See Figure 1, Figure 10, Figure 13, Figure 82, Figure 83, Figure 81.

Global Logistics Market Evidence Mix by Region

Source: ZAFTYS mix scaffold · native Typst (CeTZ donut)

KEY VISUAL TAKEAWAYS

- ▶ North America leads the modeled mix at ~27%.
- ▶ Regional evidence mix tracks where secondary sources and synthesis effort are concentrated.
- ▶ Use alongside the research process narrative for diligence on source balance.
- ▶ Shares are structural template weights until primary interview ingest.
- ▶ Read Global Logistics Market Evidence Mix by Region as a diligence scaffold - not a filing-backed split.

Global Logistics Market Evidence Mix by Respondent Role

SHARE BREAKDOWN

■ CXO / VP	51.1%
■ Manager / Lead	24.4%
■ Analyst / Practitioner	24.4%

Source: ZAFTYS mix scaffold · native Typst (CeTZ donut)

KEY VISUAL TAKEAWAYS

- ▶ CXO / VP leads the modeled mix at ~51%.
- ▶ Respondent-role mix shows intended diligence coverage across CXO, manager, and practitioner lenses.
- ▶ Use alongside the research process narrative for diligence on source balance.
- ▶ Shares are structural template weights until primary interview ingest.
- ▶ Read Global Logistics Market Evidence Mix by Respondent Role as a diligence scaffold - not a filing-backed split.

Global Logistics Market Evidence Mix by Company Tier

Source: ZAFTYS mix scaffold · native Typst (CeTZ donut)

KEY VISUAL TAKEAWAYS

- ▶ 3PL leads the modeled mix at ~36%.
- ▶ Company-tier mix balances platform leaders, specialists, and long-tail operators in the evidence set.
- ▶ Use alongside the research process narrative for diligence on source balance.
- ▶ Shares are structural template weights until primary interview ingest.
- ▶ Read Global Logistics Market Evidence Mix by Company Tier as a diligence scaffold - not a filing-backed split.

3 Market Dynamics

Market Dynamics organizes Global Logistics Market for readers covering North America, Europe, Asia Pacific, Rest of World across 2017-2036. Subsections that follow develop definition, competitive posture, segment structure, and geography without repeating raw retrieval dumps. [2]

BACKGROUND: Subsequent pages develop definition, competitive posture, segment structure, and geographic detail for Global Logistics Market, keeping quantitative statements aligned to the canonical model spine where sizing is required. [2]

STRATEGIC IMPLICATIONS: Treat this chapter as orientation. Denser analysis sits in the subsections; use the model spine for sizing decisions on Global Logistics Market. [2]

See Figure 6, Figure 5.

PESTLE Snapshot - Operating Envelope

Political

Corridor risk, alliance oversight, customs modernization

Economic

Inventory cycles, freight rate regimes, ASP stickiness

Social

Driver / warehouse labor demographics & wage pressure

Technological

WMS/TMS, ASRS/AMR, visibility twins, autonomy pilots

Legal

FMC / customs digitization / hazmat permitting

Environmental

IMO CII, EU ETS maritime, CBAM landed-cost overlays

Source: ZAFTYS research diligence frame · checklist, not a numeric scorecard

SWOT - Market System

Strengths

- Network density & multimodal optionality
- Contract logistics productivity moats
- Express brand / gateway control

Weaknesses

- Labor dependence in warehouses
- Carbon intensity of asset fleets
- Cycle exposure in ocean/air spot

Opportunities

- ASRS / AMR automation attach
- Nearshoring corridor densification
- Healthcare cold-chain compliance

Threats

- Trade & canal shocks
- Fuel / ETS cost spikes
- Digital brokerage disintermediation

3.1 Porter's Five Forces

BACKGROUND: Porter's Five Forces matters for how Global Logistics Market spend is contracted and delivered across the study horizon. [2]

STRATEGIC IMPLICATIONS: Network design and outsourcing choices for Porter's Five Forces translate Global Logistics Market growth into operator outcomes.

Decision makers should move from this Porter's Five Forces framing into share, size, and geographic diligence for Global Logistics Market. [2]

Global Logistics Market Porter's Five Forces

New Entrants

MED

Asset-light digital brokers lower some entry barriers, but scale requires carrier capacity, customs capability, and warehouse footprint. Regulatory compliance and working-capital intensity still constrain greenfield global expansion.

Supplier Power

MED

Ocean alliances, air belly capacity, chassis/labor pools, and fuel markets retain moderate leverage. Multimodal options and spot markets partially dilute lock-in on many corridors.

Rivalry

HIGH

Global logistics rivalry is intense among integrated carriers, freight forwarders, and contract 3PLs; price pressure is acute on standardized lanes while network density, service reliability, and vertical specialization remain the main differentiators.

Buyer Power

MED

Large retail, manufacturing, and e-commerce shippers negotiate aggressively on rates, SLAs, and capacity guarantees. Multi-year contracts and switching frictions temper pure price leverage.

Substitutes

MED

Private fleets, in-house warehousing, and direct carrier contracting substitute for outsourced logistics. Substitution rises when shippers prioritize control over variable cost.

Intensity badges · High / Med / Low from force narrative · ZAFTYS

KEY VISUAL TAKEAWAYS

- ▶ Read the five forces as a structure map - intensity badges summarize narrative pressure, not a scored index.
- ▶ 1 of 5 forces read high-intensity in this draft; rivalry and buyer pressure usually set pricing tone.
- ▶ Pair with SWOT and the competitive matrix for how structure translates into vendor positioning.

See Figure 4.

3.2 Market Ecosystem

BACKGROUND: The logistics ecosystem links carriers, freight forwarders, contract 3PLs, warehouse operators, brokers, and technology platforms. Value accrues to parties that control scarce capacity, customs capability, or last-mile density while orchestrating the rest of the chain. [2]

SUPPORTING STATISTICS: Physical intensity for Market Dynamics is best read through mode-appropriate volume metrics (TEU, FTK, TKM, parcel density, or warehouse cube) alongside value share - not value share alone.

REGULATORY ENVIRONMENT: Compliance cost for Market Dynamics increasingly prices safety, customs digitisation, labor hours, and emissions reporting into contracts rather than absorbing them as overhead.

STRATEGIC IMPLICATIONS: Prioritize network CapEx and contract design for Market Dynamics where volume density and regulatory certainty co-exist - bind sizing to the modeled exhibits. [2]

3.3 Company Evaluation Matrix

BACKGROUND: Competitive positioning separates global network leaders from digital challengers and niche specialists. Completeness of offering (multimodal plus warehousing) and ability to execute (density, on-time performance) remain the two axes that matter for diligence. [2]

SUPPORTING STATISTICS: Physical intensity for Market Dynamics is best read through mode-appropriate volume metrics (TEU, FTK, TKM, parcel density, or warehouse cube) alongside value share - not value share alone.

Global Logistics Market Competitor Positioning Matrix

Leaders

- DHL
- Kuehne + Nagel

Challengers

- UPS

Visionaries

- FedEx

Niche Players

- Maersk

Axes: completeness of offering (→) × ability to execute / share (↑) · ZAFTYS positioning prior

REGULATORY ENVIRONMENT: Compliance cost for Market Dynamics increasingly prices safety, customs digitisation, labor hours, and emissions reporting into contracts rather than absorbing them as overhead.

STRATEGIC IMPLICATIONS: Operators screening Market Dynamics should translate share into corridor-level capacity and cost-to-serve, not peer revenue headlines alone. [2]

See Figure 15.

3.4 Commercial Use Cases

BACKGROUND: Commercial use cases span omnichannel fulfillment, cross-border DTC parcel, manufacturing inbound sequencing, pharma cold chain, and project/oversized freight - each with distinct density, dwell, and compliance economics. [2]

SUPPORTING STATISTICS: Physical intensity for Market Dynamics is best read through mode-appropriate volume metrics (TEU, FTK, TKM, parcel density, or warehouse cube) alongside value share - not value share alone.

REGULATORY ENVIRONMENT: Compliance cost for Market Dynamics increasingly prices safety, customs digitisation, labor hours, and emissions reporting into contracts rather than absorbing them as overhead.

STRATEGIC IMPLICATIONS: Decision makers should treat Market Dynamics as a distinct operating cut: size from the model spine, then stress-test reliability and contracting mix. [2]

See Figure 6, Figure 5.

3.5 Customer Landscape and Buying Criteria

BACKGROUND: Large retail, manufacturing, and healthcare shippers buy logistics on a mix of rates, capacity guarantees, and SLA penalties. Procurement increasingly scores carbon reporting, exception visibility, and returns handling alongside unit price. [2]

SUPPORTING STATISTICS: Volume diligence for Market Dynamics should pair throughput metrics with dwell and exception rates so value share is not mistaken for operating intensity.

REGULATORY ENVIRONMENT: Policy overlays on Market Dynamics concentrate on lane documentation, workplace rules, and carbon reporting - diligence should separate base freight from accessorial and surcharge layers.

STRATEGIC IMPLICATIONS: Decision makers should treat Market Dynamics as a distinct operating cut: size from the model spine, then stress-test reliability and contracting mix.

See Figure 6, Figure 5.

3.6 Regulatory Landscape

BACKGROUND: Regulatory pressure on global logistics now concentrates on maritime decarbonization and ocean-trade compliance. IMO 2023/2024 greenhouse-gas measures, the EU Emissions Trading System (ETS) expansion to shipping, and the EU Carbon Border Adjustment Mechanism (CBAM) are raising the cost of carbon-intensive ocean moves and forcing carriers and shippers to document emissions along major corridors. [2]

SUPPORTING STATISTICS: Volume diligence for Market Dynamics should pair throughput metrics with dwell and exception rates so value share is not mistaken for operating intensity.

REGULATORY ENVIRONMENT: Policy overlays on Market Dynamics concentrate on lane documentation, workplace rules, and carbon reporting - diligence should separate base freight from accessorial and surcharge layers.

STRATEGIC IMPLICATIONS: Allocate diligence for Market Dynamics to utilization, dwell, and contract tenure - then reconcile any sizing statements to the modeled exhibits that follow. [2]

See Figure 6, Figure 5, Table 6.

Global Logistics Market Regulatory Landscape Themes

#	Theme
1.0	IMO 2024 GHG / CII
2.0	EU ETS for maritime
3.0	CBAM logistics cost pass-through
4.0	FMC / ocean alliance oversight
5.0	ASP / bunker fuel volatility

Source: Regulatory landscape · ZAFTYS

3.7 Pricing and ASP Trends

BACKGROUND: Logistics pricing remains a two-speed market: contracted ocean and truckload rates set the structural baseline, while spot markets absorb short-term capacity shocks. Fuel surcharge mechanisms (bunker, diesel, and jet) still pass through a large share of energy volatility into shipper invoices. [2]

SUPPORTING STATISTICS: Operating intensity in Market Dynamics is signaled by lane density and asset turns more than by headline market size - use physical KPIs beside the share exhibits.

REGULATORY ENVIRONMENT: Regulatory friction for Market Dynamics shows up as dwell, detention, and qualification cost - not only as headline tariff moves - and should be modeled into cost-to-serve.

STRATEGIC IMPLICATIONS: Allocate diligence for Market Dynamics to utilization, dwell, and contract tenure - then reconcile any sizing statements to the modeled exhibits that follow.

See Figure 6, Figure 5.

3.8 Investment and Funding Landscape

BACKGROUND: Capital continues to flow into asset-light and automation-heavy logistics platforms. Venture and growth equity have concentrated on digital freight brokerages, warehouse robotics (AMR/AGV fleets), and last-mile electric vehicle (EV) networks that promise denser urban delivery at lower unit operating cost. [2]

SUPPORTING STATISTICS: For Market Dynamics, read absolute capacity (cube, TEU, TKM) next to modeled USD share; the two series diverge when yield and mix shift.

REGULATORY ENVIRONMENT: Operators in Market Dynamics face rising verification burden on customs single windows, hours-of-service, and emissions disclosure; reliability of paperwork now rivals rate competitiveness.

STRATEGIC IMPLICATIONS: Allocate diligence for Market Dynamics to utilization, dwell, and contract tenure - then reconcile any sizing statements to the modeled exhibits that follow.

See Figure 6, Figure 5.

3.9 Patent Landscape

BACKGROUND: Patent activity in logistics technology clusters around AI-assisted route and network optimization, autonomous yard trucks, automated storage and retrieval systems (ASRS), and IoT tracking tags that extend shipment visibility beyond traditional EDI milestones. [2]

SUPPORTING STATISTICS: Operating intensity in Market Dynamics is signaled by lane density and asset turns more than by headline market size - use physical KPIs beside the share exhibits.

REGULATORY ENVIRONMENT: Regulatory friction for Market Dynamics shows up as dwell, detention, and qualification cost - not only as headline tariff moves - and should be modeled into cost-to-serve.

STRATEGIC IMPLICATIONS: Allocate diligence for Market Dynamics to utilization, dwell, and contract tenure - then reconcile any sizing statements to the modeled exhibits that follow.

See Figure 6, Figure 5.

3.10 Trends and Disruptions

BACKGROUND: Near-term disruptions span geopolitically driven ocean diversions, warehouse automation adoption, and the shift toward inventory regionalization. Digital freight matching and control-tower visibility are compressing quotation cycles while raising expectations for exception management. [2]

SUPPORTING STATISTICS: Operating intensity in Market Dynamics is signaled by lane density and asset turns more than by headline market size - use physical KPIs beside the share exhibits.

REGULATORY ENVIRONMENT: Regulatory friction for Market Dynamics shows up as dwell, detention, and qualification cost - not only as headline tariff moves - and should be modeled into cost-to-serve.

STRATEGIC IMPLICATIONS: Win rates for Market Dynamics favor providers that can price service clearly and keep exception control credible when lanes tighten. [2]

See Figure 6, Figure 5.

3.11 Market Drivers

BACKGROUND: Structural demand for logistics services is being lifted by cross-border e-commerce growth, omnichannel retail fulfillment (ship-from-store, dark stores, and regional DC grids), and nearshoring/friendshoring realignments that reconfigure freight lanes between Asia, North America, and Europe. [1]

SUPPORTING STATISTICS: These drivers raise requirements for parcel density, inventory positioning, and customs-capable forwarding - favoring operators that can combine multimodal capacity with warehousing and value-added services rather than single-mode carriage alone. [1]

REGULATORY ENVIRONMENT: Regulatory friction for Market Dynamics shows up as dwell, detention, and qualification cost - not only as headline tariff moves - and should be modeled into cost-to-serve.

STRATEGIC IMPLICATIONS: Allocate diligence for Market Dynamics to utilization, dwell, and contract tenure - then reconcile any sizing statements to the modeled exhibits that follow. [1]

See Figure 70, Figure 69, Figure 6, Figure 5.

Impact x Time Matrix

3.12 Market Restraints

BACKGROUND: Capacity and labor constraints remain the primary brakes on logistics growth. Persistent truck driver shortages, aging transport and port infrastructure, and high capital expenditure for green fleet transitions (alternative fuels, EV vans, shore power readiness) temper how quickly networks can absorb demand spikes. [2]

SUPPORTING STATISTICS: Operating intensity in Market Dynamics is signaled by lane density and asset turns more than by headline market size - use physical KPIs beside the share exhibits.

REGULATORY ENVIRONMENT: Regulatory friction for Market Dynamics shows up as dwell, detention, and qualification cost - not only as headline tariff moves - and should be modeled into cost-to-serve.

STRATEGIC IMPLICATIONS: Prioritize network CapEx and contract design for Market Dynamics where volume density and regulatory certainty co-exist - bind sizing to the modeled exhibits.

See Figure 70, Figure 69, Figure 6, Figure 5.

3.13 Market Opportunities

BACKGROUND: White-space opportunities concentrate in cold-chain capacity, returns/reverse logistics for e-commerce, and integrated 4PL orchestration of multi-vendor networks. Operators that pair automation with corridor density can monetize both cost-to-serve reduction and premium SLAs. [2]

SUPPORTING STATISTICS: Volume diligence for Market Dynamics should pair throughput metrics with dwell and exception rates so value share is not mistaken for operating intensity.

REGULATORY ENVIRONMENT: Policy overlays on Market Dynamics concentrate on lane documentation, workplace rules, and carbon reporting - diligence should separate base freight from accessorial and surcharge layers.

STRATEGIC IMPLICATIONS: Decision makers should treat Market Dynamics as a distinct operating cut: size from the model spine, then stress-test reliability and contracting mix.

See Figure 70, Figure 69, Figure 6, Figure 5.

3.14 Market Challenges

BACKGROUND: Execution challenges include synchronizing spot and contract books under volatile bunker and diesel costs, integrating returns into forward networks, and meeting rising emissions-reporting obligations without eroding service reliability. [2]

SUPPORTING STATISTICS: For Market Dynamics, read absolute capacity (cube, TEU, TKM) next to modeled USD share; the two series diverge when yield and mix shift.

REGULATORY ENVIRONMENT: Operators in Market Dynamics face rising verification burden on customs single windows, hours-of-service, and emissions disclosure; reliability of paperwork now rivals rate competitiveness.

STRATEGIC IMPLICATIONS: Win rates for Market Dynamics favor providers that can price service clearly and keep exception control credible when lanes tighten.

See Figure 70, Figure 69, Figure 6, Figure 5.

4 Global Logistics Market by Product & Services

Global Logistics Market by Product & Services organizes Global Logistics Market for readers covering North America, Europe, Asia Pacific, Rest of World across 2017-2036. Subsections that follow develop definition, competitive posture, segment structure, and geography without repeating raw retrieval dumps.

BACKGROUND: Global Logistics Market sized at USD 4334.30 billion in 2026. Later pages move from overview to diligence with exhibits bound to the modeled frames.

Network design and outsourcing choices for Global Logistics Market by Product & Services translate market growth into operator outcomes.

Exhibit - product & services share structure:

Product & services share structure

Segment	Share	Value
Road Freight (FTL, LTL, Express)	14.3%	619.2

Global Logistics Market Product Stacked Size (USD billion)

Source: ZAFTYS Data Bank model / verified claims.

4.1 Market Overview, by Product & Services

BACKGROUND: Global Logistics Market by Product & Services is a material operating cut of Global Logistics Market, shaped by capacity, service mix, and cost-to-serve rather than headline size alone.

SUPPORTING STATISTICS: Volume diligence for Global Logistics Market by Product & Services should pair throughput metrics with dwell and exception rates so value share is not mistaken for operating intensity.

REGULATORY ENVIRONMENT: Policy overlays on Global Logistics Market by Product & Services concentrate on lane documentation, workplace rules, and carbon reporting - diligence should separate base freight from accessorial and surcharge layers.

STRATEGIC IMPLICATIONS: Allocate diligence for Global Logistics Market by Product & Services to utilization, dwell, and contract tenure - then reconcile any sizing statements to the modeled exhibits that follow.

4.2 Road Freight (FTL, LTL, Express)

Road Freight (FTL, LTL, Express) opens through the Overview subsection that follows, then market-share and size-path exhibits where modeled. The operating brief for Road Freight (FTL, LTL, Express) is developed under Overview; this heading is the cut entry point only.

4.2.1 Overview

BACKGROUND: Road freight is the workhorse of inland logistics, dominating TKM on most continental corridors. Yield is set by contract density, fuel surcharge recovery, and empty-mile control more than spot headline rates.

SUPPORTING STATISTICS: Road freight dominates inland tonne-kilometres (TKM) in most mature markets. Contract versus spot mix, diesel/fuel surcharge pass-through, and driver availability determine realized carrier margins more than headline rates alone.

REGULATORY ENVIRONMENT: Road freight is shaped by hours-of-service / working-time rules, emissions zones in major metros, and cabotage limits on cross-border lanes.

STRATEGIC IMPLICATIONS: Win rates for Road Freight (FTL, LTL, Express) favor providers that can price service clearly and keep exception control credible when lanes tighten.

4.2.2 Market Size and Forecast

Road Freight (FTL, LTL, Express) is modeled at 260.5 USD billion in 2017 (14.3% of the Global Logistics Market total), rising to 1620.7 USD billion by 2036 at the study CAGR of 10.1%.

SUPPORTING STATISTICS: Year-grid levels for Road Freight (FTL, LTL, Express) encode both share and growth tilt versus the Global Logistics Market - ZAFTYS Market Report baseline; focus on inflection years and end-point size rather than repeating gateway or regulatory overview text.

STRATEGIC IMPLICATIONS: Decision makers should size Road Freight (FTL, LTL, Express) from the exhibits below and keep Overview macro/infrastructure narrative on the Overview page.

- Global Logistics Market projected at USD 5951.00 billion by 2030. (Logistics Market Size, Share & Growth Analysis Report, 2030)
- Logistics Market Summary The global logistics market size was valued at USD 4,109.1 billion in 2025 and is projected to grow from USD 4,334.3 billion in 2026 to USD 8,496.1 billion by 2033, at a CAGR of 10.1% from 2026 to 2033. Asia Pacific held the largest global revenue share of 35.3% in 2025. (Logistics Market Size, Share & Growth Report, 2026 - 2033)
- Global Logistics Market sized at USD 4109.10 billion in 2025. (Logistics Market Size, Share & Trends Analysis Report, 2026 - 2033)

Market size by year (Road Freight (FTL, LTL, Express), base case):

Market size spine - USD billion

Year	Base case (USD billion)
2017	260.5
2018	286.8
2019	315.7
2020	347.6
2021	382.7
2022	421.4
2023	542.1
2024	561.7
2025	587.0
2026	619.2
2027	681.7
2028	750.6
2029	826.4
2030	909.9
2031	1,001.7
2032	1,102.9
2033	1,214.3
2034	1,337.0
2035	1,472.0
2036	1,620.7

Kitting, Packaging & Labeling	3.3%	142.9
Reverse Logistics & Returns Processing	2.2%	95.3
Quality Control & Assembly	1.1%	47.6

Source: Model frame by_product · ZAFTYS

4.3 Ocean Freight (FCL, LCL)

Ocean Freight (FCL, LCL) opens through the Overview subsection that follows, then market-share and size-path exhibits where modeled. The operating brief for Ocean Freight (FCL, LCL) is developed under Overview; this heading is the cut entry point only.

4.3.1 Overview

BACKGROUND: Ocean container logistics is TEU-led: alliance capacity, blank sailings, and canal / port congestion set schedule reliability and spot versus contract rate spreads on major east-west lanes.

SUPPORTING STATISTICS: Ocean container trades are measured in twenty-foot equivalent units (TEU). East-west trunk lanes still dominate absolute TEU, while nearshoring and regionalization lift secondary corridors and blank-sailing sensitivity.

REGULATORY ENVIRONMENT: Ocean operators face IMO CII/GHG intensity rules and EU ETS maritime cost pass-through on Europe-touching trades; documentation friction also rises where CBAM landed-cost overlays apply.

STRATEGIC IMPLICATIONS: Allocate diligence for Ocean Freight (FCL, LCL) to utilization, dwell, and contract tenure - then reconcile any sizing statements to the modeled exhibits that follow.

4.3.2 Market Size and Forecast

Ocean Freight (FCL, LCL) is modeled at 240.4 USD billion in 2017 (13.2% of the Global Logistics Market total), rising to 1496.0 USD billion by 2036 at the study CAGR of 10.1%.

SUPPORTING STATISTICS: Historical path for Ocean Freight (FCL, LCL) tracks capacity absorption, rate cycles, and mix shift inside Global Logistics Market - ZAFTYS Market Report; read the year grid for level changes rather than restating Overview infrastructure context.

STRATEGIC IMPLICATIONS: Use the Ocean Freight (FCL, LCL) size path to stress-test CapEx timing and contract tenure; bind any external publisher CAGR to the modeled exhibits.

- Global Logistics Market projected at USD 8496.10 billion by 2033. (Logistics Market Size, Share & Trends Analysis Report, 2026 - 2033)

Ocean container logistics is TEU-led: alliance capacity, blank sailings, and canal / port congestion set schedule reliability and spot versus contract rate spreads on major east-west lanes.

Market size by year (Ocean Freight (FCL, LCL), base case):

Market size spine · USD billion

Year	Base case (USD billion)
2017	240.4
2018	264.7
2019	291.4
2020	320.9
2021	353.3
2022	389.0
2023	500.4
2024	518.5
2025	541.9
2026	571.6
2027	629.3
2028	692.8
2029	762.8
2030	839.9
2031	924.7
2032	1,018.1
2033	1,120.9
2034	1,234.1
2035	1,358.8
2036	1,496.0

Source: ZAFTYS Data Bank market model

See Figure 3, Table 46.

4.4 Air Freight (Express, General Cargo)

Air Freight (Express, General Cargo) opens through the Overview subsection that follows, then market-share and size-path exhibits where modeled. The operating brief for Air Freight (Express, General Cargo) is developed under Overview; this heading is the cut entry point only.

4.4.1 Overview

BACKGROUND: Air cargo monetizes time-definite FTK and chargeable weight, with belly capacity on passenger networks competing against freighter fleets. Pharma and high-tech lanes pay for temperature and security overlays.

SUPPORTING STATISTICS: Air cargo is tracked in freight tonne-kilometres (FTK) and chargeable weight; belly capacity on passenger networks versus dedicated freighters sets yield and recovery after demand shocks. IATA-style industry tallies remain the common reference frame for global FTK directionally.

REGULATORY ENVIRONMENT: Air cargo remains gated by security screening regimes, dangerous-goods rules, and bilateral traffic rights; pharma lanes add GDP and temperature qualification overlays.

STRATEGIC IMPLICATIONS: Win rates for Air Freight (Express, General Cargo) favor providers that can price service clearly and keep exception control credible when lanes tighten.

4.5 Rail Freight & Intermodal

Rail Freight & Intermodal opens through the Overview subsection that follows, then market-share and size-path exhibits where modeled. The operating brief for Rail Freight & Intermodal is developed under Overview; this heading is the cut entry point only.

4.5.1 Overview

BACKGROUND: Rail and intermodal services convert long-haul road tonnes where corridor density and terminal performance support reliable schedules. First- and last-mile trucking attach still gates door-to-door competitiveness.

SUPPORTING STATISTICS: Rail and intermodal lifts convert long-haul road tonnes into TKM where corridor density, terminal dwell, and equipment cycles support reliable schedules. Conversion economics hinge on first/last-mile trucking attach.

REGULATORY ENVIRONMENT: Policy overlays on Rail Freight & Intermodal concentrate on lane documentation, workplace rules, and carbon reporting - diligence should separate base freight from accessorial and surcharge layers.

STRATEGIC IMPLICATIONS: Decision makers should treat Rail Freight & Intermodal as a distinct operating cut: size from the model spine, then stress-test reliability and contracting mix.

4.6 Ambient Warehousing

Ambient Warehousing opens through the Overview subsection that follows, then market-share and size-path exhibits where modeled. The operating brief for Ambient Warehousing is developed under Overview; this heading is the cut entry point only.

4.6.1 Overview

BACKGROUND: Warehousing and distribution investment is tilting toward automation - ASRS, AMR/AGV fleets, and goods-to-person systems - especially where labor is scarce and SKU velocity is high. Micro-fulfillment and urban satellite sites support same-day and next-day last-mile promises.

SUPPORTING STATISTICS: Warehousing intensity is read through cubic capacity (sq ft / m²), pallet positions, picks per hour, and inventory turns rather than TEU/FTK. Automation (ASRS/AMR) raises throughput per square foot where labor is scarce and SKU velocity is high.

REGULATORY ENVIRONMENT: Warehouse automation programs sit under workplace safety rules and, in cities, zoning / low-emission constraints that shape micro-fulfillment location choices.

STRATEGIC IMPLICATIONS: Prioritize network CapEx and contract design for Ambient Warehousing where volume density and regulatory certainty co-exist - bind sizing to the modeled exhibits.

4.7 Temperature-Controlled / Cold Storage

Evidence density for Temperature-Controlled / Cold Storage varies; this subsection emphasizes structural role over anecdote.

Temperature-Controlled / Cold Storage opens through the Overview subsection that follows, then market-share and size-path exhibits where modeled. The operating brief for Temperature-Controlled / Cold Storage is developed under Overview; this heading is the cut entry point only.

4.7.1 Overview

BACKGROUND: Temperature-Controlled / Cold Storage is a material operating cut of Global Logistics Market, shaped by capacity, service mix, and cost-to-serve rather than headline size alone.

SUPPORTING STATISTICS: Healthcare logistics volumes are small in TEU terms but high in value density; validated cold-chain tonnes, cold cubic metres, GDP handling, and excursion rates matter more than absolute tonne counts.

REGULATORY ENVIRONMENT: Pharma logistics sits under GDP and temperature-control expectations; qualified packaging and continuous monitoring are becoming table stakes on specialty and biologic lanes.

STRATEGIC IMPLICATIONS: Decision makers should treat Temperature-Controlled / Cold Storage as a distinct operating cut: size from the model spine, then stress-test reliability and contracting mix.

4.8 Automated Storage & Retrieval Systems (ASRS Nodes)

Automated Storage & Retrieval Systems (ASRS Nodes) opens through the Overview subsection that follows, then market-share and size-path exhibits where modeled. The operating brief for Automated Storage & Retrieval Systems (ASRS Nodes) is developed under Overview; this heading is the cut entry point only.

Network design and outsourcing choices for Automated Storage & Retrieval Systems (ASRS Nodes) translate market growth into operator outcomes.

4.8.1 Overview

BACKGROUND: Automated Storage & Retrieval Systems (ASRS Nodes) is a material operating cut of Global Logistics Market, shaped by capacity, service mix, and cost-to-serve rather than headline size alone.

SUPPORTING STATISTICS: Warehousing intensity is read through cubic capacity (sq ft / m²), pallet positions, picks per hour, and inventory turns rather than TEU/FTK. Automation (ASRS/AMR) raises throughput per square foot where labor is scarce and SKU velocity is high.

REGULATORY ENVIRONMENT: Warehouse automation programs sit under workplace safety rules and, in cities, zoning / low-emission constraints that shape micro-fulfillment location choices.

STRATEGIC IMPLICATIONS: Prioritize network CapEx and contract design for Automated Storage & Retrieval Systems (ASRS Nodes) where volume density and regulatory certainty co-exist - bind sizing to the modeled exhibits.

4.9 Air & Ocean Freight Management

Air & Ocean Freight Management opens through the Overview subsection that follows, then market-share and size-path exhibits where modeled. The operating brief for Air & Ocean Freight Management is developed under Overview; this heading is the cut entry point only.

4.9.1 Overview

BACKGROUND: Ocean container logistics is TEU-led: alliance capacity, blank sailings, and canal / port congestion set schedule reliability and spot versus contract rate spreads on major east-west lanes.

SUPPORTING STATISTICS: Air cargo is tracked in freight tonne-kilometres (FTK) and chargeable weight; belly capacity on passenger networks versus dedicated freighters sets yield and recovery after demand shocks. IATA-style industry tallies remain the common reference frame for global FTK directionally.

REGULATORY ENVIRONMENT: Ocean operators face IMO CII/GHG intensity rules and EU ETS maritime cost pass-through on Europe-touching trades; documentation friction also rises where CBAM landed-cost overlays apply.

STRATEGIC IMPLICATIONS: Win rates for Air & Ocean Freight Management favor providers that can price service clearly and keep exception control credible when lanes tighten.

4.10 Customs Clearance & Port Handling

Customs Clearance & Port Handling opens through the Overview subsection that follows, then market-share and size-path exhibits where modeled. The operating brief for Customs Clearance & Port Handling is developed under Overview; this heading is the cut entry point only.

4.10.1 Overview

BACKGROUND: Freight forwarding monetizes multimodal orchestration, customs brokerage, and exception management across ocean and air. Visibility platforms and carrier allotments remain the core competitive assets.

SUPPORTING STATISTICS: Freight forwarding economics track TEU/air kg under management, brokerage yield per clearance, and allotment utilization - not owned fleet TKM. Visibility and exception handling remain the sticky attach products.

REGULATORY ENVIRONMENT: Customs brokerage yield tracks digitisation of national single windows and post-Brexit / trade-remedy documentation burden on cross-border clearances.

STRATEGIC IMPLICATIONS: Prioritize network CapEx and contract design for Customs Clearance & Port Handling where volume density and regulatory certainty co-exist - bind sizing to the modeled exhibits.

4.11 Multimodal Transport Orchestration

Multimodal Transport Orchestration opens through the Overview subsection that follows, then market-share and size-path exhibits where modeled. The operating brief for Multimodal Transport Orchestration is developed under Overview; this heading is the cut entry point only.

Multimodal Transport Orchestration matters for how logistics spend is contracted and delivered across the study horizon.

4.11.1 Overview

BACKGROUND: Multimodal Transport Orchestration is a material operating cut of Global Logistics Market, shaped by capacity, service mix, and cost-to-serve rather than headline size alone.

SUPPORTING STATISTICS: Volume diligence for Multimodal Transport Orchestration should pair throughput metrics with dwell and exception rates so value share is not mistaken for operating intensity.

REGULATORY ENVIRONMENT: Policy overlays on Multimodal Transport Orchestration concentrate on lane documentation, workplace rules, and carbon reporting - diligence should separate base freight from accessorial and surcharge layers.

STRATEGIC IMPLICATIONS: Prioritize network CapEx and contract design for Multimodal Transport Orchestration where volume density and regulatory certainty co-exist - bind sizing to the modeled exhibits.

4.12 Kitting, Packaging & Labeling

Within the study market, Kitting, Packaging & Labeling is read through verified demand and competitive signals rather than publisher teasers.

Kitting, Packaging & Labeling opens through the Overview subsection that follows, then market-share and size-path exhibits where modeled. The operating brief for Kitting, Packaging & Labeling is developed under Overview; this heading is the cut entry point only.

4.12.1 Overview

BACKGROUND: Kitting, Packaging & Labeling is a material operating cut of Global Logistics Market, shaped by capacity, service mix, and cost-to-serve rather than headline size alone.

SUPPORTING STATISTICS: Retail and e-commerce logistics is volume-led by packages per year and stops per route. Density (parcels per square kilometre) and reverse-flow rates dominate cost-to-serve versus pure linehaul TKM.

REGULATORY ENVIRONMENT: Operators in Kitting, Packaging & Labeling face rising verification burden on customs single windows, hours-of-service, and emissions disclosure; reliability of paperwork now rivals rate competitiveness.

STRATEGIC IMPLICATIONS: Decision makers should treat Kitting, Packaging & Labeling as a distinct operating cut: size from the model spine, then stress-test reliability and contracting mix.

4.13 Reverse Logistics & Returns Processing

Reverse Logistics & Returns Processing opens through the Overview subsection that follows, then market-share and size-path exhibits where modeled. The operating brief for Reverse Logistics & Returns Processing is developed under Overview; this heading is the cut entry point only.

4.13.1 Overview

BACKGROUND: Reverse Logistics & Returns Processing is a material operating cut of Global Logistics Market, shaped by capacity, service mix, and cost-to-serve rather than headline size alone.

SUPPORTING STATISTICS: Retail and e-commerce logistics is volume-led by packages per year and stops per route. Density (parcels per square kilometre) and reverse-flow rates dominate cost-to-serve versus pure linehaul TKM.

REGULATORY ENVIRONMENT: Operators in Reverse Logistics & Returns Processing face rising verification burden on customs single windows, hours-of-service, and emissions disclosure; reliability of paperwork now rivals rate competitiveness.

STRATEGIC IMPLICATIONS: Decision makers should treat Reverse Logistics & Returns Processing as a distinct operating cut: size from the model spine, then stress-test reliability and contracting mix.

4.14 Quality Control & Assembly

Quality Control & Assembly opens through the Overview subsection that follows, then market-share and size-path exhibits where modeled. The operating brief for Quality Control & Assembly is developed under Overview; this heading is the cut entry point only.

Anchor Quality Control & Assembly to the modeled series, then layer section-specific operating nuance.

4.14.1 Overview

BACKGROUND: Quality Control & Assembly is a material operating cut of Global Logistics Market, shaped by capacity, service mix, and cost-to-serve rather than headline size alone.

SUPPORTING STATISTICS: Operating intensity in Quality Control & Assembly is signaled by lane density and asset turns more than by headline market size - use physical KPIs beside the share exhibits.

REGULATORY ENVIRONMENT: Regulatory friction for Quality Control & Assembly shows up as dwell, detention, and qualification cost - not only as headline tariff moves - and should be modeled into cost-to-serve.

STRATEGIC IMPLICATIONS: Prioritize network CapEx and contract design for Quality Control & Assembly where volume density and regulatory certainty co-exist - bind sizing to the modeled exhibits.

5 Global Logistics Market by Application

Global Logistics Market by Application organizes Global Logistics Market for readers covering North America, Europe, Asia Pacific, Rest of World across 2017-2036. Subsections that follow develop definition, competitive posture, segment structure, and geography without repeating raw retrieval dumps. [1] [2]

Global Logistics Market by Application opens through the Overview subsection that follows, then market-share and size-path exhibits where modeled. The operating brief for Global Logistics Market by Application is developed under Overview; this heading is the cut entry point only.

Exhibit - application share structure:

Application share structure

Shipper to last mile - diligence metrics under each node - ZAFTYS logistics operating model

Logistics cost-to-serve stack

Read value creation as cost-to-serve anatomy - not a textbook Porter strip. Diligence should separate base freight from accessorials, dwell, and exception cost.

Linehaul 28%	Pickup / delivery 18%	Warehousing 22%	Customs / docs 12%	Last mile 20%
Linehaul Lane rate + fuel / bunker	Pickup / delivery First-mile handoff	Warehousing Cube, labor, ASRS attach	Customs / docs Brokerage + compliance	Last mile Stop density + returns

Illustrative share of landed logistics cost - ZAFTYS priors - not a textbook Porter strip

5.1 Market Overview, by Application

BACKGROUND: Global Logistics Market by Application is a material operating cut of Global Logistics Market, shaped by capacity, service mix, and cost-to-serve rather than headline size alone.

SUPPORTING STATISTICS: Operating intensity in Global Logistics Market by Application is signaled by lane density and asset turns more than by headline market size - use physical KPIs beside the share exhibits.

REGULATORY ENVIRONMENT: Regulatory friction for Global Logistics Market by Application shows up as dwell, detention, and qualification cost - not only as headline tariff moves - and should be modeled into cost-to-serve.

STRATEGIC IMPLICATIONS: Prioritize network CapEx and contract design for Global Logistics Market by Application where volume density and regulatory certainty co-exist - bind sizing to the modeled exhibits.

5.2 Retail & E-commerce

Retail & E-commerce opens through the Overview subsection that follows, then market-share and size-path exhibits where modeled. The operating brief for Retail & E-commerce is developed under Overview; this heading is the cut entry point only.

5.2.1 Overview

BACKGROUND: Retail and e-commerce logistics is defined by last-mile delivery density, micro-fulfillment centers near demand, and reverse logistics for returns. Omnichannel programs (BOPIS, ship-from-store) blur the line between store inventory and DC stock.

SUPPORTING STATISTICS: Last-mile delivery economics improve with hyper-local inventory positioning and consolidated parcel routes, while reverse logistics - returns processing and circular resale/refurbishment flows - is becoming a standalone cost and capability P&L for large retailers.

REGULATORY ENVIRONMENT: Regulatory friction for Retail & E-commerce shows up as dwell, detention, and qualification cost - not only as headline tariff moves - and should be modeled into cost-to-serve.

STRATEGIC IMPLICATIONS: Prioritize network CapEx and contract design for Retail & E-commerce where volume density and regulatory certainty co-exist - bind sizing to the modeled exhibits.

5.3 Manufacturing & Industrial

Manufacturing & Industrial opens through the Overview subsection that follows, then market-share and size-path exhibits where modeled. The operating brief for Manufacturing & Industrial is developed under Overview; this heading is the cut entry point only.

5.3.1 Overview

BACKGROUND: Manufacturing and industrial logistics prioritizes inbound sequencing, line-side delivery, and spare-parts networks. Nearshoring is reshaping lane maps and raising demand for regional warehouse capacity.

SUPPORTING STATISTICS: Physical intensity for Manufacturing & Industrial is best read through mode-appropriate volume metrics (TEU, FTK, TKM, parcel density, or warehouse cube) alongside value share - not value share alone.

REGULATORY ENVIRONMENT: Compliance cost for Manufacturing & Industrial increasingly prices safety, customs digitisation, labor hours, and emissions reporting into contracts rather than absorbing them as overhead.

STRATEGIC IMPLICATIONS: Allocate diligence for Manufacturing & Industrial to utilization, dwell, and contract tenure - then reconcile any sizing statements to the modeled exhibits that follow.

5.4 Healthcare & Pharmaceuticals

Healthcare & Pharmaceuticals opens through the Overview subsection that follows, then market-share and size-path exhibits where modeled. The operating brief for Healthcare & Pharmaceuticals is developed under Overview; this heading is the cut entry point only.

5.4.1 Overview

BACKGROUND: Healthcare and pharma logistics demand rigorous cold-chain control for biologics, vaccines, and temperature-sensitive therapeutics. Qualified packaging, continuous temperature monitoring, and GDP-aligned handling separate specialty providers from generalist 3PLs.

SUPPORTING STATISTICS: Healthcare logistics volumes are small in TEU terms but high in value density; validated cold-chain tonnes, cold cubic metres, GDP handling, and excursion rates matter more than absolute tonne counts.

REGULATORY ENVIRONMENT: Pharma logistics sits under GDP and temperature-control expectations; qualified packaging and continuous monitoring are becoming table stakes on specialty and biologic lanes.

STRATEGIC IMPLICATIONS: Win rates for Healthcare & Pharmaceuticals favor providers that can price service clearly and keep exception control credible when lanes tighten.

5.5 Food & Beverages

Food & Beverages opens through the Overview subsection that follows, then market-share and size-path exhibits where modeled. The operating brief for Food & Beverages is developed under Overview; this heading is the cut entry point only.

5.5.1 Overview

BACKGROUND: Food and beverage logistics hinges on perishable cold chain - fresh, frozen, and controlled-atmosphere moves from production to retail DCs. Integrity of the temperature band, dwell time, and last-mile handoff drive shrink and service risk.

SUPPORTING STATISTICS: Food and beverage cold chain is capacity-constrained by multi-temperature fleet and DC cube; shrink and appointment discipline matter as much as tonnage moved.

REGULATORY ENVIRONMENT: Policy overlays on Food & Beverages concentrate on lane documentation, workplace rules, and carbon reporting - diligence should separate base freight from accessorial and surcharge layers.

STRATEGIC IMPLICATIONS: Prioritize network CapEx and contract design for Food & Beverages where volume density and regulatory certainty co-exist - bind sizing to the modeled exhibits.

5.6 Oil, Gas & Chemicals

Oil, Gas & Chemicals opens through the Overview subsection that follows, then market-share and size-path exhibits where modeled. The operating brief for Oil, Gas & Chemicals is developed under Overview; this heading is the cut entry point only.

5.6.1 Overview

BACKGROUND: Oil, Gas & Chemicals is a material operating cut of Global Logistics Market, shaped by capacity, service mix, and cost-to-serve rather than headline size alone.

SUPPORTING STATISTICS: Volume diligence for Oil, Gas & Chemicals should pair throughput metrics with dwell and exception rates so value share is not mistaken for operating intensity.

REGULATORY ENVIRONMENT: Policy overlays on Oil, Gas & Chemicals concentrate on lane documentation, workplace rules, and carbon reporting - diligence should separate base freight from accessorial and surcharge layers.

STRATEGIC IMPLICATIONS: Allocate diligence for Oil, Gas & Chemicals to utilization, dwell, and contract tenure - then reconcile any sizing statements to the modeled exhibits that follow.

6 Global Logistics Market by Technology

Global Logistics Market by Technology organizes Global Logistics Market for readers covering North America, Europe, Asia Pacific, Rest of World across 2017-2036. Subsections that follow develop definition, competitive posture, segment structure, and geography without repeating raw retrieval dumps. [1] [2]

Global Logistics Market by Technology opens through the Overview subsection that follows, then market-share and size-path exhibits where modeled. The operating brief for Global Logistics Market by Technology is developed under Overview; this heading is the cut entry point only.

Global Logistics Market Mode Stacked Size (USD billion)

Source: ZAFTYS Data Bank model / verified claims.

6.1 Market Overview, by Technology

BACKGROUND: Global Logistics Market by Technology is a material operating cut of Global Logistics Market, shaped by capacity, service mix, and cost-to-serve rather than headline size alone.

SUPPORTING STATISTICS: Operating intensity in Global Logistics Market by Technology is signaled by lane density and asset turns more than by headline market size - use physical KPIs beside the share exhibits.

REGULATORY ENVIRONMENT: Regulatory friction for Global Logistics Market by Technology shows up as dwell, detention, and qualification cost - not only as headline tariff moves - and should be modeled into cost-to-serve.

STRATEGIC IMPLICATIONS: Win rates for Global Logistics Market by Technology favor providers that can price service clearly and keep exception control credible when lanes tighten.

6.2 Road Freight Fleet

Road Freight Fleet opens through the Overview subsection that follows, then market-share and size-path exhibits where modeled. The operating brief for Road Freight Fleet is developed under Overview; this heading is the cut entry point only.

6.2.1 Overview

BACKGROUND: Road freight is the workhorse of inland logistics, dominating TKM on most continental corridors. Yield is set by contract density, fuel surcharge recovery, and empty-mile control more than spot headline rates.

SUPPORTING STATISTICS: Road freight dominates inland tonne-kilometres (TKM) in most mature markets. Contract versus spot mix, diesel/fuel surcharge pass-through, and driver availability determine realized carrier margins more than headline rates alone.

REGULATORY ENVIRONMENT: Road freight is shaped by hours-of-service / working-time rules, emissions zones in major metros, and cabotage limits on cross-border lanes.

STRATEGIC IMPLICATIONS: Operators screening Road Freight Fleet should translate share into corridor-level capacity and cost-to-serve, not peer revenue headlines alone.

6.3 Ocean Fleet & Chartering

Ocean Fleet & Chartering opens through the Overview subsection that follows, then market-share and size-path exhibits where modeled. The operating brief for Ocean Fleet & Chartering is developed under Overview; this heading is the cut entry point only.

6.3.1 Overview

BACKGROUND: Ocean container logistics is TEU-led: alliance capacity, blank sailings, and canal / port congestion set schedule reliability and spot versus contract rate spreads on major east-west lanes.

SUPPORTING STATISTICS: Ocean container trades are measured in twenty-foot equivalent units (TEU). East-west trunk lanes still dominate absolute TEU, while nearshoring and regionalization lift secondary corridors and blank-sailing sensitivity.

REGULATORY ENVIRONMENT: Ocean operators face IMO CII/GHG intensity rules and EU ETS maritime cost pass-through on Europe-touching trades; documentation friction also rises where CBAM landed-cost overlays apply.

STRATEGIC IMPLICATIONS: Operators screening Ocean Fleet & Chartering should translate share into corridor-level capacity and cost-to-serve, not peer revenue headlines alone.

6.4 Air Cargo Capacity

Air Cargo Capacity opens through the Overview subsection that follows, then market-share and size-path exhibits where modeled. The operating brief for Air Cargo Capacity is developed under Overview; this heading is the cut entry point only.

6.4.1 Overview

BACKGROUND: Air cargo monetizes time-definite FTK and chargeable weight, with belly capacity on passenger networks competing against freighter fleets. Pharma and high-tech lanes pay for temperature and security overlays.

SUPPORTING STATISTICS: Air cargo is tracked in freight tonne-kilometres (FTK) and chargeable weight; belly capacity on passenger networks versus dedicated freighters sets yield and recovery after demand shocks. IATA-style industry tallies remain the common reference frame for global FTK directionally.

REGULATORY ENVIRONMENT: Air cargo remains gated by security screening regimes, dangerous-goods rules, and bilateral traffic rights; pharma lanes add GDP and temperature qualification overlays.

STRATEGIC IMPLICATIONS: Allocate diligence for Air Cargo Capacity to utilization, dwell, and contract tenure - then reconcile any sizing statements to the modeled exhibits that follow.

6.5 Rail & Intermodal

Rail & Intermodal opens through the Overview subsection that follows, then market-share and size-path exhibits where modeled. The operating brief for Rail & Intermodal is developed under Overview; this heading is the cut entry point only.

6.5.1 Overview

BACKGROUND: Rail and intermodal services convert long-haul road tonnes where corridor density and terminal performance support reliable schedules. First- and last-mile trucking attach still gates door-to-door competitiveness.

SUPPORTING STATISTICS: Rail and intermodal lifts convert long-haul road tonnes into TKM where corridor density, terminal dwell, and equipment cycles support reliable schedules. Conversion economics hinge on first/last-mile trucking attach.

REGULATORY ENVIRONMENT: Compliance cost for Rail & Intermodal increasingly prices safety, customs digitisation, labor hours, and emissions reporting into contracts rather than absorbing them as overhead.

STRATEGIC IMPLICATIONS: Allocate diligence for Rail & Intermodal to utilization, dwell, and contract tenure - then reconcile any sizing statements to the modeled exhibits that follow.

6.6 EV Vans & Green Fleet

EV Vans & Green Fleet opens through the Overview subsection that follows, then market-share and size-path exhibits where modeled. The operating brief for EV Vans & Green Fleet is developed under Overview; this heading is the cut entry point only.

6.6.1 Overview

BACKGROUND: EV Vans & Green Fleet is a material operating cut of Global Logistics Market, shaped by capacity, service mix, and cost-to-serve rather than headline size alone.

SUPPORTING STATISTICS: Green and autonomous fleet pilots are still a small share of absolute TKM, but they concentrate CapEx where urban emissions zones and energy costs force early replacement of diesel vans and yard tractors.

REGULATORY ENVIRONMENT: Policy overlays on EV Vans & Green Fleet concentrate on lane documentation, workplace rules, and carbon reporting - diligence should separate base freight from accessorial and surcharge layers.

STRATEGIC IMPLICATIONS: Allocate diligence for EV Vans & Green Fleet to utilization, dwell, and contract tenure - then reconcile any sizing statements to the modeled exhibits that follow.

6.7 Autonomous Freight Pilots

Autonomous Freight Pilots opens through the Overview subsection that follows, then market-share and size-path exhibits where modeled. The operating brief for Autonomous Freight Pilots is developed under Overview; this heading is the cut entry point only.

6.7.1 Overview

BACKGROUND: Autonomous Freight Pilots is a material operating cut of Global Logistics Market, shaped by capacity, service mix, and cost-to-serve rather than headline size alone.

SUPPORTING STATISTICS: Green and autonomous fleet pilots are still a small share of absolute TKM, but they concentrate CapEx where urban emissions zones and energy costs force early replacement of diesel vans and yard tractors.

REGULATORY ENVIRONMENT: Policy overlays on Autonomous Freight Pilots concentrate on lane documentation, workplace rules, and carbon reporting - diligence should separate base freight from accessorial and surcharge layers.

STRATEGIC IMPLICATIONS: Decision makers should treat Autonomous Freight Pilots as a distinct operating cut: size from the model spine, then stress-test reliability and contracting mix.

6.8 WMS / TMS Software Stack

WMS / TMS Software Stack opens through the Overview subsection that follows, then market-share and size-path exhibits where modeled. The operating brief for WMS / TMS Software Stack is developed under Overview; this heading is the cut entry point only.

6.8.1 Overview

BACKGROUND: WMS / TMS Software Stack is a material operating cut of Global Logistics Market, shaped by capacity, service mix, and cost-to-serve rather than headline size alone.

SUPPORTING STATISTICS: Software attach is measured in sites live, shipments under TMS control, and exception closure rates - not freight tonnes. Value scales with network complexity rather than TEU ownership.

REGULATORY ENVIRONMENT: Operators in WMS / TMS Software Stack face rising verification burden on customs single windows, hours-of-service, and emissions disclosure; reliability of paperwork now rivals rate competitiveness.

STRATEGIC IMPLICATIONS: Prioritize network CapEx and contract design for WMS / TMS Software Stack where volume density and regulatory certainty co-exist - bind sizing to the modeled exhibits.

7 Global Logistics Market by End Users

Global Logistics Market by End Users organizes Global Logistics Market for readers covering North America, Europe, Asia Pacific, Rest of World across 2017-2036. Subsections that follow develop definition, competitive posture, segment structure, and geography without repeating raw retrieval dumps. [1] [2] [3]

Global Logistics Market by End Users opens through the Overview subsection that follows, then market-share and size-path exhibits where modeled. The operating brief for Global Logistics Market by End Users is developed under Overview; this heading is the cut entry point only.

Exhibit - end user share structure:

End user share structure

Segment	Share	Value

Global Logistics Market End-User Stacked Size (USD billion)

Source: ZAFTYS Data Bank model / verified claims.

7.1 Market Overview, by End Users

BACKGROUND: Global Logistics Market by End Users is a material operating cut of Global Logistics Market, shaped by capacity, service mix, and cost-to-serve rather than headline size alone.

SUPPORTING STATISTICS: Volume diligence for Global Logistics Market by End Users should pair throughput metrics with dwell and exception rates so value share is not mistaken for operating intensity.

REGULATORY ENVIRONMENT: Policy overlays on Global Logistics Market by End Users concentrate on lane documentation, workplace rules, and carbon reporting - diligence should separate base freight from accessorial and surcharge layers.

STRATEGIC IMPLICATIONS: Win rates for Global Logistics Market by End Users favor providers that can price service clearly and keep exception control credible when lanes tighten.

7.2 Shippers / Asset Owners

BACKGROUND: Shippers and asset owners buy logistics as a portfolio of rates, capacity guarantees, and SLA penalties. Procurement increasingly scores carbon reporting and exception visibility alongside unit price. [2] [1]

SUPPORTING STATISTICS: Volume diligence for Global Logistics Market by End Users should pair throughput metrics with dwell and exception rates so value share is not mistaken for operating intensity.

REGULATORY ENVIRONMENT: Policy overlays on Global Logistics Market by End Users concentrate on lane documentation, workplace rules, and carbon reporting - diligence should separate base freight from accessorial and surcharge layers.

STRATEGIC IMPLICATIONS: Allocate diligence for Global Logistics Market by End Users to utilization, dwell, and contract tenure - then reconcile any sizing statements to the modeled exhibits that follow. [2] [1]

7.3 3PL / Contract Logistics Operators

BACKGROUND: Contract 3PL operators monetize warehousing, distribution, and transportation management under multi-year statements of work. Density in the customer's network and automation attach drive stickiness. [1] [2]

SUPPORTING STATISTICS: For Global Logistics Market by End Users, read absolute capacity (cube, TEU, TKM) next to modeled USD share; the two series diverge when yield and mix shift.

REGULATORY ENVIRONMENT: Operators in Global Logistics Market by End Users face rising verification burden on customs single windows, hours-of-service, and emissions disclosure; reliability of paperwork now rivals rate competitiveness.

STRATEGIC IMPLICATIONS: Prioritize network CapEx and contract design for Global Logistics Market by End Users where volume density and regulatory certainty co-exist - bind sizing to the modeled exhibits. [1] [2]

7.4 4PL / Lead Logistics Providers (LLP)

BACKGROUND: 4PL / lead logistics providers orchestrate multivendor networks without necessarily owning assets. Value sits in control-tower visibility, carrier management, and continuous improvement against shipper KPIs. [1] [2]

SUPPORTING STATISTICS: Operating intensity in Global Logistics Market by End Users is signaled by lane density and asset turns more than by headline market size - use physical KPIs beside the share exhibits.

REGULATORY ENVIRONMENT: Regulatory friction for Global Logistics Market by End Users shows up as dwell, detention, and qualification cost - not only as headline tariff moves - and should be modeled into cost-to-serve.

STRATEGIC IMPLICATIONS: Operators screening Global Logistics Market by End Users should translate share into corridor-level capacity and cost-to-serve, not peer revenue headlines alone. [1] [2]

7.5 Carriers & Asset Light Brokers

BACKGROUND: Carriers monetize owned or controlled capacity on road, ocean, air, or rail. Network density, equipment cycles, and fuel pass-through dominate earnings quality versus pure brokerage models. [1] [2]

SUPPORTING STATISTICS: Operating intensity in Global Logistics Market by End Users is signaled by lane density and asset turns more than by headline market size - use physical KPIs beside the share exhibits.

REGULATORY ENVIRONMENT: Regulatory friction for Global Logistics Market by End Users shows up as dwell, detention, and qualification cost - not only as headline tariff moves - and should be modeled into cost-to-serve.

STRATEGIC IMPLICATIONS: Decision makers should treat Global Logistics Market by End Users as a distinct operating cut: size from the model spine, then stress-test reliability and contracting mix. [1] [2]

8 Global Logistics Market by Geography

BACKGROUND: Geographic demand for Global Logistics Market is uneven. North America and Europe remain high-value, density-led pools; Asia-Pacific dominates absolute parcel and manufacturing outbound volume; Rest of World gateways (GCC, Brazil, southern Africa) matter for corridor optionality rather than equal share of global spend. Coverage spans North America, Europe, Asia Pacific, Rest of World. [1]

SUPPORTING STATISTICS: Read geography through TEU at coastal gateways, FTK on air bridges, inland TKM, and parcel density per metro catchment - not regional USD share alone. World Bank LPI and UN Comtrade flows triangulate where infrastructure and trade intensity reinforce each other. [1]

REGULATORY ENVIRONMENT: Policy overlays differ by theater - US FMC and infrastructure bills in North America; EU ETS maritime / CBAM and urban low-emission zones in Europe; dual-circulation and mega-port programs in China; National Logistics Policy / DFC programs in India; USMCA nearshoring rules on Mexico corridors. [1]

STRATEGIC IMPLICATIONS: Operators should allocate network CapEx to corridors where volume density and regulatory certainty co-exist, and treat RoW hubs as optionality nodes rather than peer-sized demand pools. [1]

Exhibit - regional structure:

Region	Share	Value

8.1 North America

BACKGROUND: North America logistics is corridor-driven - US domestic parcel and truckload density, LA/Long Beach and East Coast gateways, and USMCA cross-border manufacturing lanes into Mexico and Canada. [1]

STRATEGIC IMPLICATIONS: Network design and outsourcing choices for North America translate Global Logistics Market growth into operator outcomes. Decision makers should move from this North America framing into share, size, and geographic diligence for Global Logistics Market. [1]

See Figure 9, Figure 27, Table 3.

8.1.1 United States

United States opens through the Overview subsection that follows, then market-share and size-path exhibits where modeled. The operating brief for United States is developed under Overview; this heading is the cut entry point only.

See Figure 9, Figure 27, Table 3.

8.1.2 Overview

BACKGROUND: The United States remains one of the world's largest logistics demand pools, with e-commerce logistics spend exceeding roughly US\$1.19 trillion in recent industry tallies. Parcel and freight volumes are anchored by Amazon's private and partnered network alongside FedEx and UPS carrier capacity, which together set pricing and service benchmarks for national delivery.

SUPPORTING STATISTICS: US physical intensity is read through truckload TKM, Census freight TSI, LA/LB TEU dwell, and parcel density in top metro catchments - not USD share alone.

REGULATORY ENVIRONMENT: FMC ocean-alliance and detention/demurrage rules, EPA/CARB fleet emissions expectations, and infrastructure bill corridor funding shape US cost-to-serve on gateway and inland lanes.

STRATEGIC IMPLICATIONS: Gateway diligence concentrates on Los Angeles / Long Beach dwell and rail ramps, East Coast port pairs, and FMC alliance oversight on transpacific and transatlantic trades. Inland, truckload TKM and parcel density in top metro catchments dominate cost-to-serve.

See Figure 9, Figure 27, Table 3.

8.1.3 Market Share

United States accounts for approximately 19.5% of Global Logistics Market in the 2017 base year (model frame share).

SUPPORTING STATISTICS: US physical intensity is read through truckload TKM, Census freight TSI, LA/LB TEU dwell, and parcel density in top metro catchments - not USD share alone.

STRATEGIC IMPLICATIONS: Read United States sizing and share through the modeled exhibits below; diligence utilization and contracting mix rather than headline market size alone.

Geographic share structure (model frame):

Geographic share structure

Geography	Share	Value
United States	19.5%	845.2

Source: ZAFTYS Data Bank market model

See Figure 2, Figure 9, Figure 27, Table 3.

Global Logistics Market Regional Share (base year)

SHARE BREAKDOWN

North America	25%
Europe	22%
Asia Pacific	35%
Rest of World	18%

KEY VISUAL TAKEAWAYS

- ▶ Asia Pacific leads the modeled mix at ~35%.
- ▶ Asia Pacific leads regional share at ~35% of the base-year spine.
- ▶ Shares are evidence-weighted against the canonical market size model.
- ▶ Pair with geography KPI cards and size exhibits for size × share reading.

Source: ZAFTYS mix scaffold · native Typst (CeTZ donut)

8.1.4 Market Size and Forecast

United States is modeled at 355.5 USD billion in 2017 (19.5% of the Global Logistics Market total), rising to 2212.2 USD billion by 2036 at the study CAGR of 10.1%.

SUPPORTING STATISTICS: Forecast trajectory for United States compounds from the base-year slice along a sector-tilted CAGR path that still reconciles to the Global Logistics Market - ZAFTYS Market Report spine when aggregated with peer cuts.

STRATEGIC IMPLICATIONS: Operators diligencing United States should reconcile share stability with tilted growth - flat peer CAGRs are not assumed across cuts. Market size by year (United States, base case):

Market size spine · USD billion

Year	Base case (USD billion)
2017	355.5
2018	391.4
2019	431.0
2020	474.5
2021	522.4
2022	575.2
2023	739.9
2024	766.7
2025	801.3
2026	845.2
2027	930.6
2028	1,024.5
2029	1,128.0
2030	1,241.9
2031	1,367.4
2032	1,505.5
2033	1,657.5
2034	1,825.0
2035	2,009.3
2036	2,212.2

Source: ZAFTYS Data Bank market model

See Figure 1, Figure 9, Figure 27, Table 3.

8.1.5 Canada

Canada opens through the Overview subsection that follows, then market-share and size-path exhibits where modeled. The operating brief for Canada is developed under Overview; this heading is the cut entry point only.

See Figure 9, Figure 27, Table 3.

8.1.6 Overview

BACKGROUND: Canada's logistics market is corridor-driven - USMCA cross-border trucking, port gateways, and long-haul rail - with e-commerce growth concentrated in a few metro catchments that reward dense last-mile networks.

SUPPORTING STATISTICS: Volume metrics emphasize cross-border truck TKM, Vancouver/Montreal/Halifax TEU, and parcel density in Toronto-Montreal catchments.

REGULATORY ENVIRONMENT: USMCA documentation and cross-border brokerage performance govern whether corridor density converts into reliable door-to-door service.

STRATEGIC IMPLICATIONS: Brokerage reliability at the border and rail/port dwell are the binding diligence items for shippers building north-south networks.

See Figure 9, Figure 27, Table 3.

8.1.7 Market Share

Canada accounts for approximately 2.8% of Global Logistics Market in the 2017 base year (model frame share).

SUPPORTING STATISTICS: Canada is corridor-metric: USMCA cross-border truck TKM, port gateway TEU, and long-haul rail tonnes into a handful of metro e-commerce catchments.

STRATEGIC IMPLICATIONS: Read Canada sizing and share through the modeled exhibits below; diligence utilization and contracting mix rather than headline market size alone.

Geographic share structure (model frame):

Geographic share structure

Geography	Share	Value
Canada	2.8%	121.4

Source: ZAFTYS Data Bank market model

See Figure 2, Figure 9, Figure 27, Table 3.

8.1.8 Market Size and Forecast

Canada is modeled at 51.05 USD billion in 2017 (2.8% of the Global Logistics Market total), rising to 317.7 USD billion by 2036 at the study CAGR of 10.1%.

SUPPORTING STATISTICS: Forecast trajectory for Canada compounds from the base-year slice along a sector-tilted CAGR path that still reconciles to the Global Logistics Market - ZAFTYS Market Report spine when aggregated with peer cuts.

STRATEGIC IMPLICATIONS: Operators diligencing Canada should reconcile share stability with tilted growth - flat peer CAGRs are not assumed across cuts.

Market size by year (Canada, base case):

Market size spine · USD billion

Year	Base case (USD billion)
2017	51.0
2018	56.2
2019	61.9
2020	68.1
2021	75.0
2022	82.6
2023	106.2
2024	110.1
2025	115.1
2026	121.4
2027	133.6
2028	147.1
2029	162.0
2030	178.3
2031	196.3
2032	216.2
2033	238.0
2034	262.0
2035	288.5
2036	317.7

Source: ZAFTYS Data Bank market model

See Figure 1, Figure 9, Figure 27, Table 3.

8.1.9 Mexico

Mexico opens through the Overview subsection that follows, then market-share and size-path exhibits where modeled. The operating brief for Mexico is developed under Overview; this heading is the cut entry point only.

See Figure 9, Figure 27, Table 3.

8.1.10 Overview

BACKGROUND: Mexico's logistics demand is rising with nearshoring into USMCA manufacturing corridors. Cross-border trucking, bonded warehousing, and port-to-plant reliability are the diligence themes for shippers and 3PLs building northbound export lanes.

SUPPORTING STATISTICS: Mexico nearshoring lifts cross-border truck TKM and bonded warehouse pallet turns on USMCA lanes; port-to-plant reliability is the binding physical KPI.

REGULATORY ENVIRONMENT: USMCA rules of origin and border brokerage performance determine whether nearshoring savings survive door-to-door on northbound export lanes.

STRATEGIC IMPLICATIONS: Allocate diligence for Mexico to utilization, dwell, and contract tenure - then reconcile any sizing statements to the modeled exhibits that follow.

See Figure 9, Figure 27, Table 3.

8.1.11 Market Share

Mexico accounts for approximately 2.7% of Global Logistics Market in the 2017 base year (model frame share).

SUPPORTING STATISTICS: Mexico nearshoring lifts cross-border truck TKM and bonded warehouse pallet turns on USMCA lanes; port-to-plant reliability is the binding physical KPI.

STRATEGIC IMPLICATIONS: Read Mexico sizing and share through the modeled exhibits below; diligence utilization and contracting mix rather than headline market size alone.

Geographic share structure (model frame):

Geographic share structure

Geography	Share	Value
Mexico	2.7%	117.0

Source: ZAFTYS Data Bank market model

See Figure 2, Figure 9, Figure 27, Table 3.

8.1.12 Market Size and Forecast

Mexico is modeled at 49.23 USD billion in 2017 (2.7% of the Global Logistics Market total), rising to 306.3 USD billion by 2036 at the study CAGR of 10.1%.

SUPPORTING STATISTICS: Year-grid levels for Mexico encode both share and growth tilt versus the Global Logistics Market - ZAFTYS Market Report baseline; focus on inflection years and end-point size rather than repeating gateway or regulatory overview text.

STRATEGIC IMPLICATIONS: Decision makers should size Mexico from the exhibits below and keep Overview macro/infrastructure narrative on the Overview page.

Market size by year (Mexico, base case):

Market size spine · USD billion

Year	Base case (USD billion)
2017	49.2
2018	54.2
2019	59.7
2020	65.7
2021	72.3
2022	79.6
2023	102.4
2024	106.2
2025	110.9
2026	117.0
2027	128.8
2028	141.9
2029	156.2
2030	172.0
2031	189.3
2032	208.5
2033	229.5
2034	252.7
2035	278.2
2036	306.3

Source: ZAFTYS Data Bank market model

See Figure 1, Figure 9, Figure 27, Table 3.

8.2 Europe

BACKGROUND: Europe combines dense CEP and contract-logistics campuses with port-centric imports through Rotterdam, Antwerp, Hamburg, and Mediterranean gateways. [1]

STRATEGIC IMPLICATIONS: Europe should be diligenced with adjacent cuts of Global Logistics Market, not as an isolated publisher extract. Decision makers should move from this Europe framing into share, size, and geographic diligence for Global Logistics Market. [1]

See Figure 9, Figure 27, Table 3.

8.2.1 Germany

Germany opens through the Overview subsection that follows, then market-share and size-path exhibits where modeled. The operating brief for Germany is developed under Overview; this heading is the cut entry point only.

See Figure 9, Figure 27, Table 3.

8.2.2 Overview

BACKGROUND: Germany anchors European contract logistics and road freight, with dense manufacturing outbound lanes and CEP hubs. Energy costs, driver availability, and rail/road intermodal performance remain the operating levers that distinguish leading 3PLs on continental corridors.

SUPPORTING STATISTICS: Hamburg and other North Sea gateways set ocean TEU schedules into Central Europe; EU ETS maritime cost pass-through is increasingly visible in landed-cost models for industrial shippers.

REGULATORY ENVIRONMENT: EU ETS maritime cost pass-through, CBAM documentation on EU-touching trades, and driver working-time rules are rewriting German landed-cost models.

STRATEGIC IMPLICATIONS: Win rates for Germany favor providers that can price service clearly and keep exception control credible when lanes tighten.

See Figure 9, Figure 27, Table 3.

8.2.3 Market Share

Germany accounts for approximately 4.8% of Global Logistics Market in the 2017 base year (model frame share).

SUPPORTING STATISTICS: German physical intensity concentrates on Hamburg/North Sea TEU feeders into Central Europe, continental road TKM, and CEP hub throughput in manufacturing outbound catchments.

STRATEGIC IMPLICATIONS: Read Germany sizing and share through the modeled exhibits below; diligence utilization and contracting mix rather than headline market size alone.

Geographic share structure (model frame):

Geographic share structure

Geography	Share	Value
Germany	4.8%	208.0

Source: ZAFTYS Data Bank market model

See Figure 2, Figure 9, Figure 27, Table 3.

8.2.4 Market Size and Forecast

Germany is modeled at 87.51 USD billion in 2017 (4.8% of the Global Logistics Market total), rising to 544.5 USD billion by 2036 at the study CAGR of 10.1%.

SUPPORTING STATISTICS: Historical path for Germany tracks capacity absorption, rate cycles, and mix shift inside Global Logistics Market - ZAFTYS Market Report; read the year grid for level changes rather than restating Overview infrastructure context.

STRATEGIC IMPLICATIONS: Use the Germany size path to stress-test CapEx timing and contract tenure; bind any external publisher CAGR to the modeled exhibits. Market size by year (Germany, base case):

Market size spine · USD billion	
Year	Base case (USD billion)
2017	87.5
2018	96.4
2019	106.1
2020	116.8
2021	128.6
2022	141.6
2023	182.1
2024	188.7
2025	197.2
2026	208.0
2027	229.1
2028	252.2
2029	277.7
2030	305.7
2031	336.6
2032	370.6
2033	408.0
2034	449.2
2035	494.6
2036	544.5

Source: ZAFTYS Data Bank market model

See Figure 1, Figure 9, Figure 27, Table 3.

8.2.5 United Kingdom

United Kingdom opens through the Overview subsection that follows, then market-share and size-path exhibits where modeled. The operating brief for United Kingdom is developed under Overview; this heading is the cut entry point only.

See Figure 9, Figure 27, Table 3.

8.2.6 Overview

BACKGROUND: UK logistics demand is shaped by e-commerce penetration, port-centric imports, and post-Brexit customs friction on EU lanes. Parcel density and reverse-logistics capability are decisive for retail shippers.

SUPPORTING STATISTICS: Gateway diligence centers on Felixstowe/London Gateway TEU, Heathrow and East Midlands air cargo, and metro parcel density in London and the Midlands catchments.

REGULATORY ENVIRONMENT: Post-Brexit customs friction on EU lanes and urban delivery constraints raise brokerage and last-mile compliance cost for UK shippers.

STRATEGIC IMPLICATIONS: Operators that combine customs brokerage with returns processing and dense CEP capacity defend share as EU lane friction persists.

See Figure 9, Figure 27, Table 3.

8.2.7 Market Share

United Kingdom accounts for approximately 3.8% of Global Logistics Market in the 2017 base year (model frame share).

SUPPORTING STATISTICS: UK volume metrics center on port-centric TEU imports, domestic parcel density, and reverse-logistics rates for high-penetration e-commerce.

STRATEGIC IMPLICATIONS: Read United Kingdom sizing and share through the modeled exhibits below; diligence utilization and contracting mix rather than headline market size alone.

Geographic share structure (model frame):

Geographic share structure

Geography	Share	Value
United Kingdom	3.8%	164.7

Source: ZAFTYS Data Bank market model

See Figure 2, Figure 9, Figure 27, Table 3.

8.2.8 Market Size and Forecast

United Kingdom is modeled at 69.28 USD billion in 2017 (3.8% of the Global Logistics Market total), rising to 431.1 USD billion by 2036 at the study CAGR of 10.1%.

SUPPORTING STATISTICS: Historical path for United Kingdom tracks capacity absorption, rate cycles, and mix shift inside Global Logistics Market - ZAFTYS Market Report; read the year grid for level changes rather than restating Overview infrastructure context.

STRATEGIC IMPLICATIONS: Use the United Kingdom size path to stress-test CapEx timing and contract tenure; bind any external publisher CAGR to the modeled exhibits.

Market size by year (United Kingdom, base case):

Market size spine · USD billion

Year	Base case (USD billion)
2017	69.3
2018	76.3
2019	84.0
2020	92.5
2021	101.8
2022	112.1
2023	144.2
2024	149.4
2025	156.1
2026	164.7
2027	181.3
2028	199.7
2029	219.8
2030	242.0
2031	266.5
2032	293.4
2033	323.0
2034	355.6
2035	391.6
2036	431.1

Source: ZAFTYS Data Bank market model

See Figure 1, Figure 9, Figure 27, Table 3.

8.2.9 France

France opens through the Overview subsection that follows, then market-share and size-path exhibits where modeled. The operating brief for France is developed under Overview; this heading is the cut entry point only.

See Figure 9, Figure 27, Table 3.

8.2.10 Overview

BACKGROUND: France combines strong retail CEP volumes with industrial and pharma flows through major hubs. Urban delivery regulations and low-emission zones are accelerating EV van adoption and micro-hub strategies.

SUPPORTING STATISTICS: Physical intensity tracks parcel density in Paris and secondary metros, plus cold tonnes for pharma/food through national DC grids.

REGULATORY ENVIRONMENT: Urban low-emission zones and delivery-time rules are accelerating EV van adoption and micro-hub strategies in major French metros.

STRATEGIC IMPLICATIONS: Win rates favor operators that can price LEZ-compliant last-mile fleets without eroding next-day retail SLAs.

See Figure 9, Figure 27, Table 3.

8.2.11 Market Share

France accounts for approximately 3.4% of Global Logistics Market in the 2017 base year (model frame share).

SUPPORTING STATISTICS: French logistics volumes mix retail CEP density with industrial/pharma cold tonnes through major hubs; urban low-emission zones reshape last-mile van TKM.

STRATEGIC IMPLICATIONS: Read France sizing and share through the modeled exhibits below; diligence utilization and contracting mix rather than headline market size alone.

Geographic share structure (model frame):

Geographic share structure

Geography	Share	Value
France	3.4%	147.4

Source: ZAFTYS Data Bank market model

See Figure 2, Figure 9, Figure 27, Table 3.

8.2.12 Market Size and Forecast

France is modeled at 61.99 USD billion in 2017 (3.4% of the Global Logistics Market total), rising to 385.7 USD billion by 2036 at the study CAGR of 10.1%.

SUPPORTING STATISTICS: History through the base year for France shows how volume and yield co-moved; the forward path in the exhibits is the modeled decision series for diligence - not a second Overview narrative.

STRATEGIC IMPLICATIONS: Treat the France forecast as a corridor of capacity need; pair end-year size with utilization and mix assumptions from the share leaf.

Market size by year (France, base case):

Market size spine · USD billion

Year	Base case (USD billion)
2017	62.0
2018	68.2
2019	75.1
2020	82.7
2021	91.1
2022	100.3
2023	129.0
2024	133.7
2025	139.7
2026	147.4
2027	162.3
2028	178.6
2029	196.7
2030	216.5
2031	238.4
2032	262.5
2033	289.0
2034	318.2
2035	350.3
2036	385.7

Source: ZAFTYS Data Bank market model

See Figure 1, Figure 9, Figure 27, Table 3.

8.2.13 Italy

Italy opens through the Overview subsection that follows, then market-share and size-path exhibits where modeled. The operating brief for Italy is developed under Overview; this heading is the cut entry point only.

See Figure 9, Figure 27, Table 3.

8.2.14 Overview

BACKGROUND: Italy combines manufacturing outbound lanes in the north with port gateways on Mediterranean trades. Road congestion and fragmented trucking still shape door-to-door reliability for industrial shippers.

SUPPORTING STATISTICS: Genoa and other Mediterranean TEU nodes feed northern industrial TKM; CEP density in Milan and Rome catchments dominates retail cost-to-serve.

REGULATORY ENVIRONMENT: EU ETS/CBAM overlays plus national road and port operating rules shape Mediterranean gateway economics into northern manufacturing lanes.

STRATEGIC IMPLICATIONS: Operators with multimodal options around congested road nodes protect SLA performance better than pure truckload models.

See Figure 9, Figure 27, Table 3.

8.2.15 Market Share

Italy accounts for approximately 2.6% of Global Logistics Market in the 2017 base year (model frame share).

SUPPORTING STATISTICS: Northern manufacturing outbound TKM and Mediterranean gateway TEU define Italian physical intensity; road congestion still gates door-to-door reliability.

STRATEGIC IMPLICATIONS: Read Italy sizing and share through the modeled exhibits below; diligence utilization and contracting mix rather than headline market size alone.

Geographic share structure (model frame):

Geographic share structure

Geography	Share	Value
Italy	2.6%	112.7

Source: ZAFTYS Data Bank market model

See Figure 2, Figure 9, Figure 27, Table 3.

8.2.16 Market Size and Forecast

Italy is modeled at 47.40 USD billion in 2017 (2.6% of the Global Logistics Market total), rising to 295.0 USD billion by 2036 at the study CAGR of 10.1%.

SUPPORTING STATISTICS: Year-grid levels for Italy encode both share and growth tilt versus the Global Logistics Market - ZAFTYS Market Report baseline; focus on inflection years and end-point size rather than repeating gateway or regulatory overview text.

STRATEGIC IMPLICATIONS: Decision makers should size Italy from the exhibits below and keep Overview macro/infrastructure narrative on the Overview page.

Market size by year (Italy, base case):

Market size spine · USD billion

Year	Base case (USD billion)
2017	47.4
2018	52.2
2019	57.5
2020	63.3
2021	69.7
2022	76.7
2023	98.7
2024	102.2
2025	106.8
2026	112.7
2027	124.1
2028	136.6
2029	150.4
2030	165.6
2031	182.3
2032	200.7
2033	221.0
2034	243.3
2035	267.9
2036	295.0

Source: ZAFTYS Data Bank market model

See Figure 1, Figure 9, Figure 27, Table 3.

8.2.17 Spain

Spain opens through the Overview subsection that follows, then market-share and size-path exhibits where modeled. The operating brief for Spain is developed under Overview; this heading is the cut entry point only.

See Figure 9, Figure 27, Table 3.

8.2.18 Overview

BACKGROUND: Spain's logistics profile centers on retail CEP density in major metros and port-centric import flows. Iberian distribution campuses support both domestic e-commerce and southern European regional DCs.

SUPPORTING STATISTICS: Valencia/Barcelona/Algeciras TEU and Madrid/Barcelona parcel density are the primary physical KPIs for network design.

REGULATORY ENVIRONMENT: EU maritime carbon cost pass-through and urban delivery constraints influence Iberian DC location and fleet choices.

STRATEGIC IMPLICATIONS: Iberian DC cube that can serve Spain and Portugal jointly remains a scarce, sticky asset for pan-Iberian retailers.

See Figure 9, Figure 27, Table 3.

8.2.19 Market Share

Spain accounts for approximately 2.2% of Global Logistics Market in the 2017 base year (model frame share).

SUPPORTING STATISTICS: Spanish volumes concentrate on metro CEP density and port-centric import TEU feeding Iberian and southern European DC cube.

STRATEGIC IMPLICATIONS: Read Spain sizing and share through the modeled exhibits below; diligence utilization and contracting mix rather than headline market size alone.

Geographic share structure (model frame):

Geographic share structure

Geography	Share	Value
Spain	2.2%	95.4

Source: ZAFTYS Data Bank market model

See Figure 2, Figure 9, Figure 27, Table 3.

8.2.20 Market Size and Forecast

Spain is modeled at 40.11 USD billion in 2017 (2.2% of the Global Logistics Market total), rising to 249.6 USD billion by 2036 at the study CAGR of 10.1%.

SUPPORTING STATISTICS: Historical path for Spain tracks capacity absorption, rate cycles, and mix shift inside Global Logistics Market - ZAFTYS Market Report; read the year grid for level changes rather than restating Overview infrastructure context.

STRATEGIC IMPLICATIONS: Use the Spain size path to stress-test CapEx timing and contract tenure; bind any external publisher CAGR to the modeled exhibits.

Market size by year (Spain, base case):

Market size spine · USD billion

Year	Base case (USD billion)
2017	40.1
2018	44.2
2019	48.6
2020	53.5
2021	58.9
2022	64.9
2023	83.5
2024	86.5
2025	90.4
2026	95.4
2027	105.0
2028	115.6
2029	127.3
2030	140.1
2031	154.3
2032	169.9
2033	187.0
2034	205.9
2035	226.7
2036	249.6

Source: ZAFTYS Data Bank market model

See Figure 1, Figure 9, Figure 27, Table 3.

8.2.21 Netherlands

Netherlands opens through the Overview subsection that follows, then market-share and size-path exhibits where modeled. The operating brief for Netherlands is developed under Overview; this heading is the cut entry point only.

See Figure 9, Figure 27, Table 3.

8.2.22 Overview

BACKGROUND: The Netherlands remains a European gateway logistics hub - Rotterdam and Schiphol underpin ocean and air inbound, while dense contract logistics campuses serve pan-EU distribution.

SUPPORTING STATISTICS: Rotterdam TEU and Schiphol FTK set schedule reliability for inland Europe; warehouse pallet turns around the Randstad monetize gateway dwell conversion.

REGULATORY ENVIRONMENT: EU ETS maritime / CBAM overlays and high customs performance standards reinforce Rotterdam/Schiphol as compliance-capable European gateways.

STRATEGIC IMPLICATIONS: Compliance-capable customs and carbon-transparent pricing are becoming table stakes for pan-EU shippers using Dutch hubs.

See Figure 9, Figure 27, Table 3.

8.2.23 Market Share

Netherlands accounts for approximately 1.8% of Global Logistics Market in the 2017 base year (model frame share).

SUPPORTING STATISTICS: Rotterdam TEU and Schiphol FTK remain the European gateway yardsticks; contract-logistics campuses monetize pallet turns for pan-EU distribution.

STRATEGIC IMPLICATIONS: Read Netherlands sizing and share through the modeled exhibits below; diligence utilization and contracting mix rather than headline market size alone.

Geographic share structure (model frame):

Geographic share structure

Geography	Share	Value
Netherlands	1.8%	78.0

Source: ZAFTYS Data Bank market model

See Figure 2, Figure 9, Figure 27, Table 3.

8.2.24 Market Size and Forecast

Netherlands is modeled at 32.82 USD billion in 2017 (1.8% of the Global Logistics Market total), rising to 204.2 USD billion by 2036 at the study CAGR of 10.1%.

SUPPORTING STATISTICS: History through the base year for Netherlands shows how volume and yield co-moved; the forward path in the exhibits is the modeled decision series for diligence - not a second Overview narrative.

STRATEGIC IMPLICATIONS: Treat the Netherlands forecast as a corridor of capacity need; pair end-year size with utilization and mix assumptions from the share leaf.

Market size by year (Netherlands, base case):

Market size spine · USD billion

Year	Base case (USD billion)
2017	32.8
2018	36.1
2019	39.8
2020	43.8
2021	48.2
2022	53.1
2023	68.3
2024	70.8
2025	74.0
2026	78.0
2027	85.9
2028	94.6
2029	104.1
2030	114.6
2031	126.2
2032	139.0
2033	153.0
2034	168.5
2035	185.5
2036	204.2

Source: ZAFTYS Data Bank market model

See Figure 1, Figure 9, Figure 27, Table 3.

8.3 Asia Pacific

BACKGROUND: Asia-Pacific is the volume engine - China mega-fulfillment and export manufacturing, India policy-led logistics expansion, and high-service hubs in Japan, Korea, Singapore, and Australia. [1]

See Figure 9, Figure 27, Table 3.

8.3.1 China

China opens through the Overview subsection that follows, then market-share and size-path exhibits where modeled. The operating brief for China is developed under Overview; this heading is the cut entry point only.

See Figure 9, Figure 27, Table 3.

8.3.2 Overview

BACKGROUND: China's logistics market is defined by unmatched domestic parcel throughput - well above 130 billion parcels per year in recent cycles - and dense mega-fulfillment networks that feed both domestic retail and export manufacturing.

SUPPORTING STATISTICS: Cross-border direct-to-consumer platforms such as SHEIN and Temu have amplified outbound small-parcel flows, raising demand for air/express capacity, customs clearance, and overseas last-mile partners while domestic 3PLs scale automated sortation and regional DCs.

REGULATORY ENVIRONMENT: Customs digitisation, dual-circulation industrial policy, and mega-port programs are the operating overlays; exception control at mega-nodes matters as much as headline rates.

STRATEGIC IMPLICATIONS: Shanghai and Shenzhen TEU throughput and dual-circulation industrial policy remain the corridor anchors; operators win on exception control and mega-node automation rather than Western yield assumptions.

See Figure 9, Figure 27, Table 3.

8.3.3 Market Share

China accounts for approximately 14.5% of Global Logistics Market in the 2017 base year (model frame share).

SUPPORTING STATISTICS: China sets global benchmarks on domestic parcels (100B+ per year class) and Shanghai/Shenzhen TEU throughput; mega-node automation raises sortation rates per hour more than Western yield structures imply.

STRATEGIC IMPLICATIONS: Read China sizing and share through the modeled exhibits below; diligence utilization and contracting mix rather than headline market size alone.

Geographic share structure (model frame):

Geographic share structure

Geography	Share	Value
China	14.5%	628.5

Source: ZAFTYS Data Bank market model

See Figure 2, Figure 9, Figure 27, Table 3.

8.3.4 Market Size and Forecast

China is modeled at 264.4 USD billion in 2017 (14.5% of the Global Logistics Market total), rising to 1645.0 USD billion by 2036 at the study CAGR of 10.1%.

SUPPORTING STATISTICS: Forecast trajectory for China compounds from the base-year slice along a sector-tilted CAGR path that still reconciles to the Global Logistics Market - ZAFTYS Market Report spine when aggregated with peer cuts.

STRATEGIC IMPLICATIONS: Operators diligencing China should reconcile share stability with tilted growth - flat peer CAGRs are not assumed across cuts.

Market size by year (China, base case):

Market size spine · USD billion	
Year	Base case (USD billion)
2017	264.4
2018	291.1
2019	320.5
2020	352.8
2021	388.5
2022	427.7
2023	550.2
2024	570.1
2025	595.8
2026	628.5
2027	691.9
2028	761.8
2029	838.8
2030	923.5
2031	1,016.8
2032	1,119.5
2033	1,232.5
2034	1,357.0
2035	1,494.1
2036	1,645.0

Source: ZAFTYS Data Bank market model

See Figure 1, Figure 9, Figure 27, Table 3.

8.3.5 Japan

Japan opens through the Overview subsection that follows, then market-share and size-path exhibits where modeled. The operating brief for Japan is developed under Overview; this heading is the cut entry point only.

See Figure 9, Figure 27, Table 3.

8.3.6 Overview

BACKGROUND: Japan's logistics profile centers on high-density urban parcel delivery, tight delivery-time windows, and advanced automated fulfillment in and around major metros. Labor regulations and driver working-hour limits have tightened effective capacity, accelerating investment in automation, locker networks, and consolidated delivery models.

SUPPORTING STATISTICS: Japan's volume story is urban parcel density and locker/consolidated delivery penetration under tight time windows - FTK/TEU matter mainly at gateway edges.

REGULATORY ENVIRONMENT: Driver working-hour limits and labor rules have tightened effective road capacity, accelerating automation, locker networks, and consolidated delivery redesign.

STRATEGIC IMPLICATIONS: Decision makers should treat Japan as a distinct operating cut: size from the model spine, then stress-test reliability and contracting mix. See Figure 9, Figure 27, Table 3.

8.3.7 Market Share

Japan accounts for approximately 4.2% of Global Logistics Market in the 2017 base year (model frame share).

SUPPORTING STATISTICS: Japan's volume story is urban parcel density and locker/consolidated delivery penetration under tight time windows - FTK/TEU matter mainly at gateway edges.

STRATEGIC IMPLICATIONS: Read Japan sizing and share through the modeled exhibits below; diligence utilization and contracting mix rather than headline market size alone.

Geographic share structure (model frame):

Geographic share structure

Geography	Share	Value
Japan	4.2%	182.0

Source: ZAFTYS Data Bank market model

See Figure 2, Figure 9, Figure 27, Table 3.

8.3.8 Market Size and Forecast

Japan is modeled at 76.57 USD billion in 2017 (4.2% of the Global Logistics Market total), rising to 476.5 USD billion by 2036 at the study CAGR of 10.1%.

SUPPORTING STATISTICS: Forecast trajectory for Japan compounds from the base-year slice along a sector-tilted CAGR path that still reconciles to the Global Logistics Market - ZAFTYS Market Report spine when aggregated with peer cuts.

STRATEGIC IMPLICATIONS: Operators diligencing Japan should reconcile share stability with tilted growth - flat peer CAGRs are not assumed across cuts.

Market size by year (Japan, base case):

Market size spine · USD billion

Year	Base case (USD billion)
2017	76.6
2018	84.3
2019	92.8
2020	102.2
2021	112.5
2022	123.9
2023	159.4
2024	165.1
2025	172.6
2026	182.0
2027	200.4
2028	220.7
2029	243.0
2030	267.5
2031	294.5
2032	324.3
2033	357.0
2034	393.1
2035	432.8
2036	476.5

Source: ZAFTYS Data Bank market model

See Figure 1, Figure 9, Figure 27, Table 3.

8.3.9 India

India opens through the Overview subsection that follows, then market-share and size-path exhibits where modeled. The operating brief for India is developed under Overview; this heading is the cut entry point only.

See Figure 9, Figure 27, Table 3.

8.3.10 Overview

BACKGROUND: India's logistics market is on a steep expansion path, with industry estimates placing the opportunity at about US\$240.5 billion in 2025 and roughly US\$527.5 billion by 2033 (near 10.9% CAGR). Policy programs - PM Gati Shakti, the National Logistics Policy, and dedicated freight corridors (DFC) - are aimed at cutting logistics cost as a share of GDP and improving multimodal reliability.

SUPPORTING STATISTICS: Growth is visible in warehousing around consumption hubs, express parcel networks, and manufacturing inbound lanes tied to industrial corridors - though infrastructure and fragmented trucking still shape realized service levels.

REGULATORY ENVIRONMENT: National Logistics Policy, PM Gati Shakti, and dedicated freight corridor programs aim to cut logistics cost as a share of GDP; clearance digitisation and multimodal handoffs remain execution risks.

STRATEGIC IMPLICATIONS: Gateway diligence includes JNPT and other west-coast TEU nodes, DFC rail conversion potential, and metro e-commerce density in Delhi-NCR, Mumbai, Bengaluru, and Hyderabad catchments.

See Figure 9, Figure 27, Table 3.

8.3.11 Market Share

India accounts for approximately 5.5% of Global Logistics Market in the 2017 base year (model frame share).

SUPPORTING STATISTICS: India corridor metrics emphasize JNPT and west-coast TEU, DFC rail conversion potential, and metro e-commerce parcel density in Delhi-NCR, Mumbai, Bengaluru, and Hyderabad catchments.

STRATEGIC IMPLICATIONS: Read India sizing and share through the modeled exhibits below; diligence utilization and contracting mix rather than headline market size alone.

Geographic share structure (model frame):

Geographic share structure

Geography	Share	Value
India	5.5%	238.4

Source: ZAFTYS Data Bank market model

See Figure 2, Figure 9, Figure 27, Table 3.

8.3.12 Market Size and Forecast

India is modeled at 100.3 USD billion in 2017 (5.5% of the Global Logistics Market total), rising to 624.0 USD billion by 2036 at the study CAGR of 10.1%.

SUPPORTING STATISTICS: Forecast trajectory for India compounds from the base-year slice along a sector-tilted CAGR path that still reconciles to the Global Logistics Market - ZAFTYS Market Report spine when aggregated with peer cuts.

STRATEGIC IMPLICATIONS: Operators diligencing India should reconcile share stability with tilted growth - flat peer CAGRs are not assumed across cuts.

Market size by year (India, base case):

Market size spine · USD billion

Year	Base case (USD billion)
2017	100.3
2018	110.4
2019	121.6
2020	133.8
2021	147.3
2022	162.2
2023	208.7
2024	216.2
2025	226.0
2026	238.4
2027	262.5
2028	289.0
2029	318.2
2030	350.3
2031	385.7
2032	424.6
2033	467.5
2034	514.7
2035	566.7
2036	624.0

Source: ZAFTYS Data Bank market model

See Figure 1, Figure 9, Figure 27, Table 3.

8.3.13 South Korea

South Korea opens through the Overview subsection that follows, then market-share and size-path exhibits where modeled. The operating brief for South Korea is developed under Overview; this heading is the cut entry point only.

See Figure 9, Figure 27, Table 3.

8.3.14 Overview

BACKGROUND: South Korea's logistics market is export-manufacturing heavy, with tight air/ocean schedules out of major hubs and rising e-commerce parcel density in the Seoul catchment.

SUPPORTING STATISTICS: Busan TEU and Incheon FTK remain the gateway yardsticks; domestic parcel density and micro-fulfillment are the growth overlay.

REGULATORY ENVIRONMENT: Export-manufacturing schedules and aviation/maritime security regimes gate air and ocean allotments out of major Korean hubs.

STRATEGIC IMPLICATIONS: Allotment control on export lanes and exception visibility separate leading forwarders from spot-capacity players.

See Figure 9, Figure 27, Table 3.

8.3.15 Market Share

South Korea accounts for approximately 2.4% of Global Logistics Market in the 2017 base year (model frame share).

SUPPORTING STATISTICS: Korea export manufacturing drives tight air/ocean schedules; Seoul catchment parcel density is the domestic volume overlay.

STRATEGIC IMPLICATIONS: Read South Korea sizing and share through the modeled exhibits below; diligence utilization and contracting mix rather than headline market size alone.

Geographic share structure (model frame):

Geographic share structure

Geography	Share	Value
South Korea	2.4%	104.0

Source: ZAFTYS Data Bank market model

See Figure 2, Figure 9, Figure 27, Table 3.

8.3.16 Market Size and Forecast

South Korea is modeled at 43.76 USD billion in 2017 (2.4% of the Global Logistics Market total), rising to 272.3 USD billion by 2036 at the study CAGR of 10.1%.

SUPPORTING STATISTICS: History through the base year for South Korea shows how volume and yield co-moved; the forward path in the exhibits is the modeled decision series for diligence - not a second Overview narrative.

STRATEGIC IMPLICATIONS: Treat the South Korea forecast as a corridor of capacity need; pair end-year size with utilization and mix assumptions from the share leaf.

Market size by year (South Korea, base case):

Market size spine · USD billion

Year	Base case (USD billion)
2017	43.8
2018	48.2
2019	53.0
2020	58.4
2021	64.3
2022	70.8
2023	91.1
2024	94.4
2025	98.6
2026	104.0
2027	114.5
2028	126.1
2029	138.8
2030	152.9
2031	168.3
2032	185.3
2033	204.0
2034	224.6
2035	247.3
2036	272.3

Source: ZAFTYS Data Bank market model

See Figure 1, Figure 9, Figure 27, Table 3.

8.3.17 Australia

Australia opens through the Overview subsection that follows, then market-share and size-path exhibits where modeled. The operating brief for Australia is developed under Overview; this heading is the cut entry point only.

See Figure 9, Figure 27, Table 3.

8.3.18 Overview

BACKGROUND: Australia's logistics economics are distance-led: long domestic hauls, concentrated metro catchments, and reliance on air/ocean gateways for imports. Parcel density and warehouse labor remain the binding constraints for 3PLs.

SUPPORTING STATISTICS: Physical diligence tracks long-haul TKM between metro pairs and gateway TEU/FTK into Sydney, Melbourne, Brisbane, and Perth.

REGULATORY ENVIRONMENT: Biosecurity and import clearance regimes, plus concentrated metro delivery rules, shape gateway dwell and last-mile cost-to-serve.

STRATEGIC IMPLICATIONS: Operators with dense metro last-mile and reliable interstate linehaul capture e-commerce growth despite labor scarcity.

See Figure 9, Figure 27, Table 3.

8.3.19 Market Share

Australia accounts for approximately 1.8% of Global Logistics Market in the 2017 base year (model frame share).

SUPPORTING STATISTICS: Australia is distance-led: long domestic TKM between metro catchments and air/ocean gateway TEU/FTK for imports dominate physical diligence.

STRATEGIC IMPLICATIONS: Read Australia sizing and share through the modeled exhibits below; diligence utilization and contracting mix rather than headline market size alone.

Geographic share structure (model frame):

Geographic share structure

Geography	Share	Value
Australia	1.8%	78.0

Source: ZAFTYS Data Bank market model

See Figure 2, Figure 9, Figure 27, Table 3.

8.3.20 Market Size and Forecast

Australia is modeled at 32.82 USD billion in 2017 (1.8% of the Global Logistics Market total), rising to 204.2 USD billion by 2036 at the study CAGR of 10.1%.

SUPPORTING STATISTICS: Historical path for Australia tracks capacity absorption, rate cycles, and mix shift inside Global Logistics Market - ZAFTYS Market Report; read the year grid for level changes rather than restating Overview infrastructure context.

STRATEGIC IMPLICATIONS: Use the Australia size path to stress-test CapEx timing and contract tenure; bind any external publisher CAGR to the modeled exhibits.

Market size by year (Australia, base case):

Market size spine · USD billion

Year	Base case (USD billion)
2017	32.8
2018	36.1
2019	39.8
2020	43.8
2021	48.2
2022	53.1
2023	68.3
2024	70.8
2025	74.0
2026	78.0
2027	85.9
2028	94.6
2029	104.1
2030	114.6
2031	126.2
2032	139.0
2033	153.0
2034	168.5
2035	185.5
2036	204.2

Source: ZAFTYS Data Bank market model

See Figure 1, Figure 9, Figure 27, Table 3.

8.3.21 Indonesia

Indonesia opens through the Overview subsection that follows, then market-share and size-path exhibits where modeled. The operating brief for Indonesia is developed under Overview; this heading is the cut entry point only.

See Figure 9, Figure 27, Table 3.

8.3.22 Overview

BACKGROUND: Indonesia's logistics opportunity tracks archipelago distribution complexity, rising e-commerce, and port modernization. Reliability gaps between Java hubs and outer islands still dominate service design.

SUPPORTING STATISTICS: Java hub TEU/parcel throughput versus outer-island lane reliability is the core physical split; port modernization is the near-term lever.

REGULATORY ENVIRONMENT: Archipelago distribution policy and port modernization programs are the binding overlays between Java hubs and outer-island service design.

STRATEGIC IMPLICATIONS: Network designs that stage inventory on Java while protecting outer-island SLAs outperform single-node national models.

See Figure 9, Figure 27, Table 3.

8.3.23 Market Share

Indonesia accounts for approximately 2.0% of Global Logistics Market in the 2017 base year (model frame share).

SUPPORTING STATISTICS: Indonesia volumes split between Java hub throughput and thinner outer-island lanes; port modernization and e-commerce parcel growth are the near-term KPIs.

STRATEGIC IMPLICATIONS: Read Indonesia sizing and share through the modeled exhibits below; diligence utilization and contracting mix rather than headline market size alone.

Geographic share structure (model frame):

Geographic share structure

Geography	Share	Value
Indonesia	2.0%	86.7

Source: ZAFTYS Data Bank market model

See Figure 2, Figure 9, Figure 27, Table 3.

8.3.24 Market Size and Forecast

Indonesia is modeled at 36.46 USD billion in 2017 (2.0% of the Global Logistics Market total), rising to 226.9 USD billion by 2036 at the study CAGR of 10.1%.

SUPPORTING STATISTICS: Forecast trajectory for Indonesia compounds from the base-year slice along a sector-tilted CAGR path that still reconciles to the Global Logistics Market - ZAFTYS Market Report spine when aggregated with peer cuts.

STRATEGIC IMPLICATIONS: Operators diligencing Indonesia should reconcile share stability with tilted growth - flat peer CAGRs are not assumed across cuts.

Market size by year (Indonesia, base case):

Market size spine · USD billion

Year	Base case (USD billion)
2017	36.5
2018	40.1
2019	44.2
2020	48.7
2021	53.6
2022	59.0
2023	75.9
2024	78.6
2025	82.2
2026	86.7
2027	95.4
2028	105.1
2029	115.7
2030	127.4
2031	140.2
2032	154.4
2033	170.0
2034	187.2
2035	206.1
2036	226.9

Source: ZAFTYS Data Bank market model

See Figure 1, Figure 9, Figure 27, Table 3.

8.3.25 Singapore

Singapore opens through the Overview subsection that follows, then market-share and size-path exhibits where modeled. The operating brief for Singapore is developed under Overview; this heading is the cut entry point only.

See Figure 9, Figure 27, Table 3.

8.3.26 Overview

BACKGROUND: Singapore functions as a regional transshipment and air/ocean hub, with high value-density freight, strong customs performance, and regional control-tower roles for multinational shippers.

SUPPORTING STATISTICS: Transshipment TEU and air chargeable weight dominate absolute tonnes; value density and clearance speed are the KPIs that matter.

REGULATORY ENVIRONMENT: Free-zone customs regimes and high LPI-style clearance performance underpin Singapore's role as a regional transshipment and control-tower hub.

STRATEGIC IMPLICATIONS: Control-tower and free-zone warehousing attach remain the sticky products beyond pure gateway carriage.

See Figure 9, Figure 27, Table 3.

8.3.27 Market Share

Singapore accounts for approximately 1.2% of Global Logistics Market in the 2017 base year (model frame share).

SUPPORTING STATISTICS: Singapore volumes are high value-density: transshipment TEU, air chargeable weight, and regional control-tower shipments rather than domestic TKM.

STRATEGIC IMPLICATIONS: Read Singapore sizing and share through the modeled exhibits below; diligence utilization and contracting mix rather than headline market size alone.

Geographic share structure (model frame):

Geographic share structure

Geography	Share	Value
Singapore	1.2%	52.0

Source: ZAFTYS Data Bank market model

See Figure 2, Figure 9, Figure 27, Table 3.

8.3.28 Market Size and Forecast

Singapore is modeled at 21.88 USD billion in 2017 (1.2% of the Global Logistics Market total), rising to 136.1 USD billion by 2036 at the study CAGR of 10.1%.

SUPPORTING STATISTICS: Historical path for Singapore tracks capacity absorption, rate cycles, and mix shift inside Global Logistics Market - ZAFTYS Market Report; read the year grid for level changes rather than restating Overview infrastructure context.

STRATEGIC IMPLICATIONS: Use the Singapore size path to stress-test CapEx timing and contract tenure; bind any external publisher CAGR to the modeled exhibits.

Market size by year (Singapore, base case):

Market size spine · USD billion

Year	Base case (USD billion)
2017	21.9
2018	24.1
2019	26.5
2020	29.2
2021	32.1
2022	35.4
2023	45.5
2024	47.2
2025	49.3
2026	52.0
2027	57.3
2028	63.0
2029	69.4
2030	76.4
2031	84.1
2032	92.6
2033	102.0
2034	112.3
2035	123.6
2036	136.1

Source: ZAFTYS Data Bank market model

See Figure 1, Figure 9, Figure 27, Table 3.

8.4 Rest of World

BACKGROUND: Rest of World logistics demand concentrates in gateway hubs - GCC re-export and free-zone warehousing, Brazil domestic long-haul complexity, and southern African corridor trade. [1]

STRATEGIC IMPLICATIONS: Rest of World is a distinct operating cut of Global Logistics Market, with diligence focused on capacity, service mix, and cost-to-serve. Decision makers should move from this Rest of World framing into share, size, and geographic diligence for Global Logistics Market. [1]

See Figure 9, Figure 27, Table 3.

8.4.1 Brazil

Brazil opens through the Overview subsection that follows, then market-share and size-path exhibits where modeled. The operating brief for Brazil is developed under Overview; this heading is the cut entry point only.

See Figure 9, Figure 27, Table 3.

8.4.2 Overview

BACKGROUND: Brazil's logistics market is shaped by long domestic hauls, port gateway concentration, and complex tax/fiscal rules that raise warehousing and distribution complexity for national shippers.

SUPPORTING STATISTICS: Long domestic road TKM and concentrated port TEU define physical intensity; multi-node warehouse cube is required to navigate fiscal rules and distance.

REGULATORY ENVIRONMENT: Complex tax/fiscal rules raise warehousing and distribution complexity; port concession quality and long-haul security shape realized TKM cost.

STRATEGIC IMPLICATIONS: Operators that can manage fiscal complexity and long-haul security convert national retail growth into contracted logistics share.

See Figure 9, Figure 27, Table 3.

8.4.3 Market Share

Brazil accounts for approximately 3.2% of Global Logistics Market in the 2017 base year (model frame share).

SUPPORTING STATISTICS: Brazil physical intensity is long domestic road TKM, concentrated port TEU, and complex multi-node warehousing cube under fiscal rules that raise dwell.

STRATEGIC IMPLICATIONS: Read Brazil sizing and share through the modeled exhibits below; diligence utilization and contracting mix rather than headline market size alone.

Geographic share structure (model frame):

Geographic share structure

Geography	Share	Value
Brazil	3.2%	138.7

Source: ZAFTYS Data Bank market model

See Figure 2, Figure 9, Figure 27, Table 3.

8.4.4 Market Size and Forecast

Brazil is modeled at 58.34 USD billion in 2017 (3.2% of the Global Logistics Market total), rising to 363.0 USD billion by 2036 at the study CAGR of 10.1%.

SUPPORTING STATISTICS: Year-grid levels for Brazil encode both share and growth tilt versus the Global Logistics Market - ZAFTYS Market Report baseline; focus on inflection years and end-point size rather than repeating gateway or regulatory overview text.

STRATEGIC IMPLICATIONS: Decision makers should size Brazil from the exhibits below and keep Overview macro/infrastructure narrative on the Overview page.

Market size by year (Brazil, base case):

Market size spine · USD billion	
Year	Base case (USD billion)
2017	58.3
2018	64.2
2019	70.7
2020	77.9
2021	85.7
2022	94.4
2023	121.4
2024	125.8
2025	131.5
2026	138.7
2027	152.7
2028	168.1
2029	185.1
2030	203.8
2031	224.4
2032	247.1
2033	272.0
2034	299.5
2035	329.7
2036	363.0

Source: ZAFTYS Data Bank market model

See Figure 1, Figure 9, Figure 27, Table 3.

8.4.5 United Arab Emirates

United Arab Emirates opens through the Overview subsection that follows, then market-share and size-path exhibits where modeled. The operating brief for United Arab Emirates is developed under Overview; this heading is the cut entry point only.

See Figure 9, Figure 27, Table 3.

8.4.6 Overview

BACKGROUND: The UAE anchors GCC gateway logistics through Dubai and Abu Dhabi air/ocean hubs, free-zone warehousing, and re-export flows across the wider Middle East and South Asia.

SUPPORTING STATISTICS: Dubai/Abu Dhabi TEU and FTK plus free-zone pallet turns are the primary volume metrics for gateway and re-export plays.

REGULATORY ENVIRONMENT: Free-zone customs regimes and port/airport concession quality are the primary regulatory diligence items for GCC gateway operators.

STRATEGIC IMPLICATIONS: Free-zone customs performance and project-cargo capability separate leading operators in energy and construction adjacency.

See Figure 9, Figure 27, Table 3.

8.4.7 Market Share

United Arab Emirates accounts for approximately 1.4% of Global Logistics Market in the 2017 base year (model frame share).

SUPPORTING STATISTICS: UAE gateway metrics track Dubai/Abu Dhabi TEU and FTK plus free-zone warehouse pallet turns supporting GCC re-export flows.

STRATEGIC IMPLICATIONS: Read United Arab Emirates sizing and share through the modeled exhibits below; diligence utilization and contracting mix rather than headline market size alone.

Geographic share structure (model frame):

Geographic share structure

Geography	Share	Value
United Arab Emirates	1.4%	60.7

Source: ZAFTYS Data Bank market model

See Figure 2, Figure 9, Figure 27, Table 3.

8.4.8 Market Size and Forecast

United Arab Emirates is modeled at 25.52 USD billion in 2017 (1.4% of the Global Logistics Market total), rising to 158.8 USD billion by 2036 at the study CAGR of 10.1%.

SUPPORTING STATISTICS: Forecast trajectory for United Arab Emirates compounds from the base-year slice along a sector-tilted CAGR path that still reconciles to the Global Logistics Market - ZAFTYS Market Report spine when aggregated with peer cuts.

STRATEGIC IMPLICATIONS: Operators diligencing United Arab Emirates should reconcile share stability with tilted growth - flat peer CAGRs are not assumed across cuts.

Market size by year (United Arab Emirates, base case):

Market size spine · USD billion

Year	Base case (USD billion)
2017	25.5
2018	28.1
2019	30.9
2020	34.1
2021	37.5
2022	41.3
2023	53.1
2024	55.0
2025	57.5
2026	60.7
2027	66.8
2028	73.6
2029	81.0
2030	89.2
2031	98.2
2032	108.1
2033	119.0
2034	131.0
2035	144.3
2036	158.8

Source: ZAFTYS Data Bank market model

See Figure 1, Figure 9, Figure 27, Table 3.

8.4.9 Saudi Arabia

Saudi Arabia opens through the Overview subsection that follows, then market-share and size-path exhibits where modeled. The operating brief for Saudi Arabia is developed under Overview; this heading is the cut entry point only.

See Figure 9, Figure 27, Table 3.

8.4.10 Overview

BACKGROUND: Saudi logistics demand is expanding with Vision 2030 industrial and e-commerce programs, port/rail investment, and warehousing around Riyadh and coastal gateways.

SUPPORTING STATISTICS: Saudi volume growth shows up in port/rail tonnes and Riyadh/coastal warehouse cube as Vision 2030 industrial and e-commerce programs scale.

REGULATORY ENVIRONMENT: Vision 2030 industrial and logistics programs pair with port/rail investment rules that favor operators able to scale warehouse cube near demand.

STRATEGIC IMPLICATIONS: Early network CapEx near demand catchments locks in density before competitors catch Vision 2030 volume.

See Figure 9, Figure 27, Table 3.

8.4.11 Market Share

Saudi Arabia accounts for approximately 1.6% of Global Logistics Market in the 2017 base year (model frame share).

SUPPORTING STATISTICS: Saudi volume growth shows up in port/rail tonnes and Riyadh/coastal warehouse cube as Vision 2030 industrial and e-commerce programs scale.

STRATEGIC IMPLICATIONS: Read Saudi Arabia sizing and share through the modeled exhibits below; diligence utilization and contracting mix rather than headline market size alone.

Geographic share structure (model frame):

Geographic share structure

Geography	Share	Value
Saudi Arabia	1.6%	69.3

Source: ZAFTYS Data Bank market model

See Figure 2, Figure 9, Figure 27, Table 3.

8.4.12 Market Size and Forecast

Saudi Arabia is modeled at 29.17 USD billion in 2017 (1.6% of the Global Logistics Market total), rising to 181.5 USD billion by 2036 at the study CAGR of 10.1%.

SUPPORTING STATISTICS: Year-grid levels for Saudi Arabia encode both share and growth tilt versus the Global Logistics Market - ZAFTYS Market Report baseline; focus on inflection years and end-point size rather than repeating gateway or regulatory overview text.

STRATEGIC IMPLICATIONS: Decision makers should size Saudi Arabia from the exhibits below and keep Overview macro/infrastructure narrative on the Overview page. Market size by year (Saudi Arabia, base case):

Market size spine · USD billion

Year	Base case (USD billion)
2017	29.2
2018	32.1
2019	35.4
2020	38.9
2021	42.9
2022	47.2
2023	60.7
2024	62.9
2025	65.7
2026	69.3
2027	76.4
2028	84.1
2029	92.6
2030	101.9
2031	112.2
2032	123.5
2033	136.0
2034	149.7
2035	164.9
2036	181.5

Source: ZAFTYS Data Bank market model

See Figure 1, Figure 9, Figure 27, Table 3.

8.4.13 South Africa

South Africa opens through the Overview subsection that follows, then market-share and size-path exhibits where modeled. The operating brief for South Africa is developed under Overview; this heading is the cut entry point only.

See Figure 9, Figure 27, Table 3.

8.4.14 Overview

BACKGROUND: South Africa remains the primary southern African logistics hub, with port-rail-road corridors feeding regional trade even as domestic rail reliability and road security shape cost-to-serve.

SUPPORTING STATISTICS: South Africa remains the southern African corridor hub - port-rail-road tonnes feed regional trade even when domestic rail reliability is uneven.

REGULATORY ENVIRONMENT: Port concession quality, rail reform, and road security on long hauls dominate regulatory and operating diligence for southern African corridors.

STRATEGIC IMPLICATIONS: Operators that can hedge rail unreliability with credible road options protect regional SLA performance.

See Figure 9, Figure 27, Table 3.

8.4.15 Market Share

South Africa accounts for approximately 1.2% of Global Logistics Market in the 2017 base year (model frame share).

SUPPORTING STATISTICS: South Africa remains the southern African corridor hub - port-rail-road tonnes feed regional trade even when domestic rail reliability is uneven.

STRATEGIC IMPLICATIONS: Read South Africa sizing and share through the modeled exhibits below; diligence utilization and contracting mix rather than headline market size alone.

Geographic share structure (model frame):

Geographic share structure

Geography	Share	Value
South Africa	1.2%	52.0

Source: ZAFTYS Data Bank market model

See Figure 2, Figure 9, Figure 27, Table 3.

8.4.16 Market Size and Forecast

South Africa is modeled at 21.88 USD billion in 2017 (1.2% of the Global Logistics Market total), rising to 136.1 USD billion by 2036 at the study CAGR of 10.1%.

SUPPORTING STATISTICS: Year-grid levels for South Africa encode both share and growth tilt versus the Global Logistics Market - ZAFTYS Market Report baseline; focus on inflection years and end-point size rather than repeating gateway or regulatory overview text.

STRATEGIC IMPLICATIONS: Decision makers should size South Africa from the exhibits below and keep Overview macro/infrastructure narrative on the Overview page. Market size by year (South Africa, base case):

Market size spine · USD billion

Year	Base case (USD billion)
2017	21.9
2018	24.1
2019	26.5
2020	29.2
2021	32.1
2022	35.4
2023	45.5
2024	47.2
2025	49.3
2026	52.0
2027	57.3
2028	63.0
2029	69.4
2030	76.4
2031	84.1
2032	92.6
2033	102.0
2034	112.3
2035	123.6
2036	136.1

Source: ZAFTYS Data Bank market model

See Figure 1, Figure 9, Figure 27, Table 3.

8.4.17 GCC

GCC opens through the Overview subsection that follows, then market-share and size-path exhibits where modeled. The operating brief for GCC is developed under Overview; this heading is the cut entry point only.

See Figure 9, Figure 27, Table 3.

8.4.18 Overview

BACKGROUND: GCC logistics demand concentrates on gateway hubs, free-zone warehousing, and project cargo for energy and construction, with rising e-commerce density in metro catchments.

SUPPORTING STATISTICS: Gateway TEU/FTK and free-zone pallet turns dominate physical KPIs; project cargo spikes create premium, lumpy volume.

REGULATORY ENVIRONMENT: Compliance cost for GCC increasingly prices safety, customs digitisation, labor hours, and emissions reporting into contracts rather than absorbing them as overhead.

STRATEGIC IMPLICATIONS: Treat GCC as a hub-and-spoke portfolio - not a residual equal-share bucket - when allocating network CapEx.

See Figure 9, Figure 27, Table 3.

8.4.19 Market Share

GCC accounts for approximately 2.2% of Global Logistics Market in the 2017 base year (model frame share).

SUPPORTING STATISTICS: Physical intensity for GCC is best read through mode-appropriate volume metrics (TEU, FTK, TKM, parcel density, or warehouse cube) alongside value share - not value share alone.

STRATEGIC IMPLICATIONS: Read GCC sizing and share through the modeled exhibits below; diligence utilization and contracting mix rather than headline market size alone.

Geographic share structure (model frame):

Geographic share structure

Geography	Share	Value
Gcc	2.2%	95.4

Source: ZAFTYS Data Bank market model

See Figure 2, Figure 9, Figure 27, Table 3.

8.4.20 Market Size and Forecast

GCC is modeled at 40.11 USD billion in 2017 (2.2% of the Global Logistics Market total), rising to 249.6 USD billion by 2036 at the study CAGR of 10.1%.

SUPPORTING STATISTICS: Historical path for GCC tracks capacity absorption, rate cycles, and mix shift inside Global Logistics Market - ZAFTYS Market Report; read the year grid for level changes rather than restating Overview infrastructure context.

STRATEGIC IMPLICATIONS: Use the GCC size path to stress-test CapEx timing and contract tenure; bind any external publisher CAGR to the modeled exhibits.

Market size by year (GCC, base case):

Market size spine · USD billion

Year	Base case (USD billion)
2017	40.1
2018	44.2
2019	48.6
2020	53.5
2021	58.9
2022	64.9
2023	83.5
2024	86.5
2025	90.4
2026	95.4
2027	105.0
2028	115.6
2029	127.3
2030	140.1
2031	154.3
2032	169.9
2033	187.0
2034	205.9
2035	226.7
2036	249.6

Source: ZAFTYS Data Bank market model

See Figure 1, Figure 9, Figure 27, Table 3.

9 Key Players / Vendor Profiles

Key Players / Vendor Profiles organizes Global Logistics Market for readers covering North America, Europe, Asia Pacific, Rest of World across 2017-2036. Subsections that follow develop definition, competitive posture, segment structure, and geography without repeating raw retrieval dumps. [2]

BACKGROUND: Subsequent pages develop definition, competitive posture, segment structure, and geographic detail for Global Logistics Market, keeping quantitative statements aligned to the canonical model spine where sizing is required.

STRATEGIC IMPLICATIONS: Prioritize network CapEx and contract design for Key Players / Vendor Profiles where volume density and regulatory certainty co-exist - bind sizing to the modeled exhibits.

See Figure 15, Figure 28.

Global Logistics Market Company Market Share (Top 5 vs Fragment)

KEY VISUAL TAKEAWAYS

- ▶ Fragment / Others leads the modeled mix at ~67%.
- ▶ DHL leads named peers at ~8.5% modeled share.
- ▶ Fragment / long-tail operators still account for ~67.2% of activity.
- ▶ Share is a competitive scaffold for diligence - not a filing-backed revenue split.

9.1.1 Overview

DHL / Deutsche Post - Operator metadata

Field	Detail
Company	DHL / Deutsche Post
Headquarters	Bonn, Germany
Scale (context)	Deutsche Post DHL Group ~EUR 80B+ group revenue (recent FY)
Primary segments	Express, Global Forwarding, Supply Chain, eCommerce
Geographic focus	Europe core; strong APAC and Americas express; global forwarding stations
Strategic focus	Integrated express + contract logistics; network density in Europe/APAC
Network posture	Global air/road hubs; DHL Express + DSC warehousing footprint

Source: ZAFTYS operator dossier (publishable synthesis)

BACKGROUND: DHL / Deutsche Post is headquartered in Bonn, Germany. Estimated scale: Deutsche Post DHL Group ~EUR 80B+ group revenue (recent FY). Primary operating regions: Europe core; strong APAC and Americas express; global forwarding stations. [1] [2]

SUPPORTING STATISTICS: Service portfolio centers on Express, Global Forwarding, Supply Chain, eCommerce. Fleet / network posture: Global air/road hubs; DHL Express + DSC warehousing footprint. [1] [2]

STRATEGIC IMPLICATIONS: Strategic focus is Integrated express + contract logistics; network density in Europe/APAC. Competitive positioning should be read alongside Chapter 3 share and matrix exhibits rather than as a filing-backed revenue split. [1] [2]

See Figure 31, Figure 30.

9.1.2 Financials

BACKGROUND: DHL / Deutsche Post (Bonn, Germany) - Deutsche Post DHL Group ~EUR 80B+ group revenue (recent FY). Key logistics segments: Express, Global Forwarding, Supply Chain, eCommerce. [2] [1]

SUPPORTING STATISTICS: Figures below are industry-context estimates / directional indices unless backed by a cited filing in the Data Bank; no modeled group revenue is invented as a precision claim on this leaf. [2] [1]

STRATEGIC IMPLICATIONS: Diligence focus is yield mix across Express, Global Forwarding, Supply Chain, eCommerce, network utilization, and watchpoints (Supply Chain contract renewals, eCommerce Solutions mix, and Express premium vs economy yield split). [2] [1]

See Figure 29.

Global Logistics Market DHL / Deutsche Post - Revenue Index

KEY VISUAL TAKEAWAYS

- ▶ 2025 reaches the peak directional index at 89.90.
- ▶ Read Global Logistics Market DHL / Deutsche Post - Revenue Index as a diligence scaffold - not a filing-backed split.
- ▶ Pair with the operator dossier for corridor and portfolio context.

Source: ZAFTYS Data Bank model / verified claims.

9.1.3 Business Segments

BACKGROUND: Business segments for DHL / Deutsche Post span Express, Global Forwarding, Supply Chain, eCommerce. Geographic mix concentrates in Europe core; strong APAC and Americas express; global forwarding stations. [1]

SUPPORTING STATISTICS: Attach products and network design follow the strategic focus: Integrated express + contract logistics; network density in Europe/APAC. Portfolio reading: Express, Global Forwarding, Supply Chain, eCommerce. [1]

STRATEGIC IMPLICATIONS: Operators competing with DHL / Deutsche Post should map overlap on corridors where its network density is strongest (Global air/road hubs; DHL Express + DSC warehousing footprint). Moats (Unmatched express + contract logistics combination; deep Europe/APAC hub density; strong pharma

cold-chain franchise) should be stress-tested against risks (Labor cost inflation in EU hubs; parcel yield pressure from regional CEP challengers; air capacity cycle exposure). [1]

DHL / Deutsche Post - Brand / service portfolio

Brand / service	Mode	Detail
DHL Express	Air / road express	Time-definite B2B/B2C parcels
DHL Global Forwarding	Air / ocean	Allotment control + customs
DHL Supply Chain	Contract logistics	Warehousing + VAS campuses
DHL eCommerce	Parcel / returns	Cross-border small parcel

Source: ZAFTYS operator dossier

DHL / Deutsche Post - Moats vs risks

Dimension	Reading
Moats / strengths	Unmatched express + contract logistics combination; deep Europe/APAC hub density; strong pharma cold-chain franchise
Key risks	Labor cost inflation in EU hubs; parcel yield pressure from regional CEP challengers; air capacity cycle exposure
Watchpoints	Supply Chain contract renewals, eCommerce Solutions mix, and Express premium vs economy yield split

Source: ZAFTYS operator dossier

9.1.4 Recent Developments

RECENT DEVELOPMENTS: Chronology for DHL / Deutsche Post is shown in the Date | Type | Detail table below (publishable synthesis where bank news is thin). [1] [2]

STRATEGIC IMPLICATIONS: Watchpoints remain Supply Chain contract renewals, eCommerce Solutions mix, and Express premium vs economy yield split; bind any investment thesis to moats (Unmatched express + contract logistics combination; deep Europe/APAC hub density; strong pharma cold-chain franchise) versus risks (Labor cost inflation in EU hubs; parcel yield pressure from regional CEP challengers; air capacity cycle exposure). [1] [2]

DHL / Deutsche Post - Developments timeline

Date	Type	Detail
2023	Network	Continued Express hub densification and freighter capacity discipline
2024	Product	Supply Chain automation and pharma cold-chain lane expansion
2024-2025	Yield	eCommerce Solutions mix management under parcel yield pressure
2025	Risk	EU labor cost and emissions-compliance overlays on hub operations

Source: ZAFTYS operator dossier (publishable synthesis)

9.2 UPS

UPS opens through the Overview subsection that follows, then market-share and size-path exhibits where modeled. The operating brief for UPS is developed under Overview; this heading is the cut entry point only.

See Figure 34, Figure 33.

Global Logistics Market UPS - Geographic Mix

SHARE BREAKDOWN

Source: ZAFTYS mix scaffold · native Typst (CeTZ donut)

KEY VISUAL TAKEAWAYS

- ▶ United States leads the modeled mix at ~72%.
- ▶ United States accounts for ~72% of the modeled geographic mix.
- ▶ Use UPS geo mix to stress-test corridor exposure versus peer headlines.
- ▶ Directional prior - reconcile to filings when diligencing scale.
- ▶ Read Global Logistics Market UPS - Geographic Mix as a diligence scaffold - not a filing-backed split.

Global Logistics Market UPS - Segment Mix

SHARE BREAKDOWN

US Domestic Package	55%
International	25%
Supply Chain & Freight	20%

KEY VISUAL TAKEAWAYS

- ▶ US Domestic Package leads the modeled mix at ~55%.
- ▶ Read UPS segment mix as a diligence scaffold - not a filing-backed split.
- ▶ Pair with portfolio and timeline leaves for operating context.
- ▶ Pair with the operator dossier for corridor and portfolio context.

9.2.1 Overview

UPS - Operator metadata

Field	Detail
Company	UPS
Headquarters	Atlanta, United States
Scale (context)	~USD 90B+ group revenue (recent FY)
Primary segments	US Domestic Package, International, Supply Chain & Freight
Geographic focus	North America dominant; selective international express and forwarding
Strategic focus	Parcel density in North America; B2B/B2C last-mile and freight
Network posture	Extensive US air/ground sortation; UPS Freight / brokerage adjacency

Source: ZAFTYS operator dossier (publishable synthesis)

BACKGROUND: UPS is headquartered in Atlanta, United States. Estimated scale: ~USD 90B+ group revenue (recent FY). Primary operating regions: North America dominant; selective international express and forwarding. [1] [2]

SUPPORTING STATISTICS: Service portfolio centers on US Domestic Package, International, Supply Chain & Freight. Fleet / network posture: Extensive US air/ground sortation; UPS Freight / brokerage adjacency. [1] [2]

STRATEGIC IMPLICATIONS: Strategic focus is Parcel density in North America; B2B/B2C last-mile and freight. Competitive positioning should be read alongside Chapter 3 share and matrix exhibits rather than as a filing-backed revenue split. [1] [2]

See Figure 34, Figure 33.

9.2.2 Financials

BACKGROUND: UPS (Atlanta, United States) - ~USD 90B+ group revenue (recent FY). Key logistics segments: US Domestic Package, International, Supply Chain & Freight. [1] [2]

SUPPORTING STATISTICS: Figures below are industry-context estimates / directional indices unless backed by a cited filing in the Data Bank; no modeled group revenue is invented as a precision claim on this leaf. [1] [2]

STRATEGIC IMPLICATIONS: Diligence focus is yield mix across US Domestic Package, International, Supply Chain & Freight, network utilization, and watchpoints (US ground yield management, healthcare vertical attach, and international operating margin recovery). [1] [2]

See Figure 32.

Global Logistics Market UPS - Revenue Index

KEY VISUAL TAKEAWAYS

- ▶ 2025 reaches the peak directional index at 90.00.
- ▶ Read Global Logistics Market UPS - Revenue Index as a diligence scaffold - not a filing-backed split.
- ▶ Pair with the operator dossier for corridor and portfolio context.

Source: ZAFTYS mix scaffold · native Typst (CeTZ donut)

9.4.1 Overview

Maersk - Operator metadata

Field	Detail
Company	Maersk
Headquarters	Copenhagen, Denmark
Scale (context)	A.P. Moller-Maersk ocean + logistics franchise (multi-ten USD B)
Primary segments	Ocean, Logistics & Services, Terminals
Geographic focus	Global east-west and north-south trades; logistics denser in Europe/APAC/Americas gateways
Strategic focus	End-to-end ocean + inland logistics integration
Network posture	Global container liner network; inland warehousing / forward-ing

Source: ZAFTYS operator dossier (publishable synthesis)

BACKGROUND: Maersk is headquartered in Copenhagen, Denmark. Estimated scale: A.P. Moller-Maersk ocean + logistics franchise (multi-ten USD B). Primary operating regions: Global east-west and north-south trades; logistics denser in Europe/APAC/Americas gateways. [2] [1]

SUPPORTING STATISTICS: Service portfolio centers on Ocean, Logistics & Services, Terminals. Fleet / network posture: Global container liner network; inland warehousing / forwarding. [2] [1]

STRATEGIC IMPLICATIONS: Strategic focus is End-to-end ocean + inland logistics integration. Competitive positioning should be read alongside Chapter 3 share and matrix exhibits rather than as a filing-backed revenue split. [2] [1]

See Figure 40, Figure 39.

9.4.2 Financials

BACKGROUND: Maersk (Copenhagen, Denmark) - A.P. Moller-Maersk ocean + logistics franchise (multi-ten USD B). Key logistics segments: Ocean, Logistics & Services, Terminals. [2] [1]

SUPPORTING STATISTICS: Operating intensity in Maersk is signaled by lane density and asset turns more than by headline market size - use physical KPIs beside the share exhibits.

STRATEGIC IMPLICATIONS: Diligence focus is yield mix across Ocean, Logistics & Services, Terminals, network utilization, and watchpoints (Ocean vs Logistics & Services profit mix, contract vs spot exposure, and inland product attach rates). [2] [1]

See Figure 38.

Global Logistics Market Maersk - Revenue Index

KEY VISUAL TAKEAWAYS

- ▶ 2025 reaches the peak directional index at 98.70.
- ▶ Read Global Logistics Market Maersk - Revenue Index as a diligence scaffold - not a filing-backed split.
- ▶ Pair with the operator dossier for corridor and portfolio context.

Source: ZAFTYS Data Bank model / verified claims.

9.4.3 Business Segments

BACKGROUND: Business segments for Maersk span Ocean, Logistics & Services, Terminals. Geographic mix concentrates in Global east-west and north-south trades; logistics denser in Europe/APAC/Americas gateways. [1] [3] [2]

SUPPORTING STATISTICS: Attach products and network design follow the strategic focus: End-to-end ocean + inland logistics integration. Portfolio reading: Ocean, Logistics & Services, Terminals. [1] [3] [2]

STRATEGIC IMPLICATIONS: Operators competing with Maersk should map overlap on corridors where its network density is strongest (Global container liner network; inland warehousing / forwarding). Moats (Ocean capacity control plus inland logistics attach; terminal stakes; integrator narrative with shippers) should be stress-tested against risks (Container freight rate cyclicity; logistics integration execution; competition from pure-play forwarders on service flexibility). [1] [3] [2]

Maersk - Brand / service portfolio

Brand / service	Mode	Detail
Maersk Ocean	Container liner	Alliance capacity + contracts
Logistics & Services	Forwarding / inland	Integrator attach
APM Terminals	Terminals	Gateway stakes

Source: ZAFYYS operator dossier

Maersk - Moats vs risks

Dimension	Reading
Moats / strengths	Ocean capacity control plus inland logistics attach; terminal stakes; integrator narrative with shippers
Key risks	Container freight rate cyclical; logistics integration execution; competition from pure-play forwarders on service flexibility
Watchpoints	Ocean vs Logistics & Services profit mix, contract vs spot exposure, and inland product attach rates

Source: ZAFYYS operator dossier

9.4.4 Recent Developments

RECENT DEVELOPMENTS: Chronology for Maersk is shown in the Date | Type | Detail table below (publishable synthesis where bank news is thin). [1]

STRATEGIC IMPLICATIONS: Watchpoints remain Ocean vs Logistics & Services profit mix, contract vs spot exposure, and inland product attach rates; bind any investment thesis to moats (Ocean capacity control plus inland logistics attach; terminal stakes; integrator narrative with shippers) versus risks (Container freight rate cyclical; logistics integration execution; competition from pure-play forwarders on service flexibility). [1]

Maersk - Developments timeline

Date	Type	Detail
2023	Strategy	Continued integrator push beyond ocean carriage
2024	Yield	Ocean contract vs spot book management after rate reset
2024-2025	Product	Inland warehousing and forwarding attach
2025	Risk	Logistics integration vs pure-play forwarder flexibility

9.5.1 Overview

Kuehne + Nagel - Operator metadata

Field	Detail
Company	Kuehne + Nagel
Headquarters	Schindellegi, Switzerland
Scale (context)	~CHF 20B+ group revenue (recent FY)
Primary segments	Sea Logistics, Air Logistics, Road, Contract Logistics
Geographic focus	Truly global station network with Europe HQ gravity
Strategic focus	Asset-light forwarding leadership; contract logistics growth
Network posture	Global seafreight / airfreight stations; contract warehouses

Source: ZAFTYS operator dossier (publishable synthesis)

BACKGROUND: Kuehne + Nagel is headquartered in Schindellegi, Switzerland. Estimated scale: ~CHF 20B+ group revenue (recent FY). Primary operating regions: Truly global station network with Europe HQ gravity. [1]

SUPPORTING STATISTICS: Service portfolio centers on Sea Logistics, Air Logistics, Road, Contract Logistics. Fleet / network posture: Global seafreight / airfreight stations; contract warehouses. [1]

STRATEGIC IMPLICATIONS: Strategic focus is Asset-light forwarding leadership; contract logistics growth. Competitive positioning should be read alongside Chapter 3 share and matrix exhibits rather than as a filing-backed revenue split. [1]

See Figure 43, Figure 42.

9.5.2 Financials

BACKGROUND: Kuehne + Nagel (Schindellegi, Switzerland) - ~CHF 20B+ group revenue (recent FY). Key logistics segments: Sea Logistics, Air Logistics, Road, Contract Logistics. [1]

SUPPORTING STATISTICS: Figures below are industry-context estimates / directional indices unless backed by a cited filing in the Data Bank; no modeled group revenue is invented as a precision claim on this leaf. [1]

STRATEGIC IMPLICATIONS: Diligence focus is yield mix across Sea Logistics, Air Logistics, Road, Contract Logistics, network utilization, and watchpoints (Sea Logistics gross profit per TEU, Air perishables/pharma mix, and contract logistics conversion). [1]

See Figure 41.

Global Logistics Market Kuehne + Nagel - Revenue Index

KEY VISUAL TAKEAWAYS

- ▶ 2025 reaches the peak directional index at 95.90.
- ▶ Read Global Logistics Market Kuehne + Nagel - Revenue Index as a diligence scaffold - not a filing-backed split.
- ▶ Pair with the operator dossier for corridor and portfolio context.

Source: ZAFTYS Data Bank model / verified claims.

9.5.3 Business Segments

BACKGROUND: Business segments for Kuehne + Nagel span Sea Logistics, Air Logistics, Road, Contract Logistics. Geographic mix concentrates in Truly global station network with Europe HQ gravity. [3] [2] [1]

SUPPORTING STATISTICS: Attach products and network design follow the strategic focus: Asset-light forwarding leadership; contract logistics growth. Portfolio reading: Sea Logistics, Air Logistics, Road, Contract Logistics. [3] [2] [1]

STRATEGIC IMPLICATIONS: Operators competing with Kuehne + Nagel should map overlap on corridors where its network density is strongest (Global seafreight / airfreight stations; contract warehouses). Moats (Sea/air forwarding scale with high service control; pharma and high-tech vertical depth; contract logistics expansion) should be stress-tested against risks (Sea/air volume cyclicity; margin compression when rates normalize; IT/platform investment race). [3] [2] [1]

Kuehne + Nagel - Brand / service portfolio

Brand / service	Mode	Detail
Sea Logistics	Core offering	Asset-light forwarding leadership; contract logistics growth
Air Logistics	Core offering	Global seafreight / airfreight stations; contract warehouses
Road	Core offering	Attach / density play
Contract Logistics	Core offering	Attach / density play

Source: ZAFTYS operator dossier

Kuehne + Nagel - Moats vs risks

Dimension	Reading
Moats / strengths	Sea/air forwarding scale with high service control; pharma and high-tech vertical depth; contract logistics expansion
Key risks	Sea/air volume cyclicity; margin compression when rates normalize; IT/platform investment race
Watchpoints	Sea Logistics gross profit per TEU, Air perishables/pharma mix, and contract logistics conversion

Source: ZAFTYS operator dossier

9.5.4 Recent Developments

RECENT DEVELOPMENTS: Chronology for Kuehne + Nagel is shown in the Date | Type | Detail table below (publishable synthesis where bank news is thin). [1] [2]

STRATEGIC IMPLICATIONS: Watchpoints remain Sea Logistics gross profit per TEU, Air perishables/pharma mix, and contract logistics conversion; bind any investment thesis to moats (Sea/air forwarding scale with high service control; pharma and high-tech vertical depth; contract logistics expansion) versus risks (Sea/air volume cyclicity; margin compression when rates normalize; IT/platform investment race). [1] [2]

Kuehne + Nagel - Developments timeline

Date	Type	Detail
2022-2023	Network	Kuehne + Nagel: capacity and contract-logistics density investments aligned to Asset-light forwarding leadership; contract logistics growth.
2023-2024	M&A / Product	Portfolio attach and automation/visibility products around core Asset-light forwarding leadership; contract logistics growth.
2024-2025	Yield	Pricing and mix management under volatile ocean/air/parcel cycles; watch Sea Logistics gross profit per TEU, Air perishables/pharma mix, and contract logistics conversion.
2025-2026	Risk	Execution against stated risks (Sea/air volume cyclicity; margin compression when rates normalize; IT/platform investment race) remains the diligence overlay.

9.6.1 Overview

DB Schenker - Operator metadata

Field	Detail
Company	DB Schenker
Headquarters	Essen, Germany
Scale (context)	Deutsche Bahn logistics arm (multi-ten EUR B)
Primary segments	Land Transport, Air/Ocean Freight, Contract Logistics
Geographic focus	Europe core land; global air/ocean forwarding
Strategic focus	European land freight density; air/ocean forwarding
Network posture	European road/rail corridors; global forwarding stations

Source: ZAFTYS operator dossier (publishable synthesis)

BACKGROUND: DB Schenker is headquartered in Essen, Germany. Estimated scale: Deutsche Bahn logistics arm (multi-ten EUR B). Primary operating regions: Europe core land; global air/ocean forwarding. [1] [3]

SUPPORTING STATISTICS: Service portfolio centers on Land Transport, Air/Ocean Freight, Contract Logistics. Fleet / network posture: European road/rail corridors; global forwarding stations. [1] [3]

STRATEGIC IMPLICATIONS: Strategic focus is European land freight density; air/ocean forwarding. Competitive positioning should be read alongside Chapter 3 share and matrix exhibits rather than as a filing-backed revenue split. [1] [3]

See Figure 46, Figure 45.

9.6.2 Financials

BACKGROUND: DB Schenker (Essen, Germany) - Deutsche Bahn logistics arm (multi-ten EUR B). Key logistics segments: Land Transport, Air/Ocean Freight, Contract Logistics. [1]

SUPPORTING STATISTICS: Volume diligence for DB Schenker should pair throughput metrics with dwell and exception rates so value share is not mistaken for operating intensity.

STRATEGIC IMPLICATIONS: Diligence focus is yield mix across Land Transport, Air/Ocean Freight, Contract Logistics, network utilization, and watchpoints (Ownership transition outcomes, land transport yield, and contract logistics automation spend). [1]

See Figure 44.

Global Logistics Market DB Schenker - Revenue Index

KEY VISUAL TAKEAWAYS

- ▶ 2025 reaches the peak directional index at 98.70.
- ▶ Read Global Logistics Market DB Schenker - Revenue Index as a diligence scaffold - not a filing-backed split.
- ▶ Pair with the operator dossier for corridor and portfolio context.

9.9.3 Business Segments

BACKGROUND: Business segments for Geodis span Freight Forwarding, Contract Logistics, Distribution & Express. Geographic mix concentrates in Europe-led with selective Americas/APAC forwarding. [2] [1]

SUPPORTING STATISTICS: Attach products and network design follow the strategic focus: European contract logistics + global forwarding. Portfolio reading: Freight Forwarding, Contract Logistics, Distribution & Express. [2] [1]

STRATEGIC IMPLICATIONS: Operators competing with Geodis should map overlap on corridors where its network density is strongest (European warehouse footprint; air/ocean stations). Moats (European contract logistics depth; automotive and retail verticals; SNCF multimodal adjacency) should be stress-tested against risks (European industrial softness; competitive pressure from DSV/K+N on forwarding; wage inflation in warehouses). [2] [1]

Geodis - Brand / service portfolio

Brand / service	Mode	Detail
Freight Forwarding	Core offering	European contract logistics + global forwarding
Contract Logistics	Core offering	European warehouse footprint; air/ocean stations
Distribution & Express	Core offering	Attach / density play

Source: ZAFTYS operator dossier

Geodis - Moats vs risks

Dimension	Reading
Moats / strengths	European contract logistics depth; automotive and retail verticals; SNCF multimodal adjacency
Key risks	European industrial softness; competitive pressure from DSV/K+N on forwarding; wage inflation in warehouses
Watchpoints	Contract logistics occupancy/productivity, forwarding yield, and e-commerce distribution density

Source: ZAFTYS operator dossier

9.9.4 Recent Developments

RECENT DEVELOPMENTS: Chronology for Geodis is shown in the Date | Type | Detail table below (publishable synthesis where bank news is thin). [1] [2]

STRATEGIC IMPLICATIONS: Watchpoints remain Contract logistics occupancy/productivity, forwarding yield, and e-commerce distribution density; bind any investment thesis to moats (European contract logistics depth; automotive and retail verticals; SNCF multimodal adjacency) versus risks (European industrial softness; competitive pressure from DSV/K+N on forwarding; wage inflation in warehouses). [1] [2]

Geodis - Developments timeline

Date	Type	Detail
2022-2023	Network	Geodis: capacity and contract-logistics density investments aligned to European contract logistics + global forwarding.
2023-2024	M&A / Product	Portfolio attach and automation/visibility products around core European contract logistics + global forwarding.
2024-2025	Yield	Pricing and mix management under volatile ocean/air/parcel cycles; watch Contract logistics occupancy/productivity, forwarding yield, and e-commerce distribution density.
2025-2026	Risk	Execution against stated risks (European industrial softness; competitive pressure from DSV/K+N on forwarding; wage inflation in warehouses) remains the diligence overlay.

9.10 Sinotrans

Sinotrans opens through the Overview subsection that follows, then market-share and size-path exhibits where modeled. The operating brief for Sinotrans is developed under Overview; this heading is the cut entry point only.

See Figure 58, Figure 57.

Global Logistics Market Sinotrans - Geographic Mix

SHARE BREAKDOWN

Source: ZAFTYS mix scaffold · native Typst (CeTZ donut)

KEY VISUAL TAKEAWAYS

- ▶ Asia Pacific leads the modeled mix at ~74%.
- ▶ Asia Pacific accounts for ~74% of the modeled geographic mix.
- ▶ Use Sinotrans geo mix to stress-test corridor exposure versus peer headlines.
- ▶ Directional prior - reconcile to filings when diligencing scale.
- ▶ Read Global Logistics Market Sinotrans - Geographic Mix as a diligence scaffold - not a filing-backed split.

Global Logistics Market Sinotrans - Segment Mix

KEY VISUAL TAKEAWAYS

- ▶ Agency leads the modeled mix at ~38%.
- ▶ Read Sinotrans segment mix as a diligence scaffold - not a filing-backed split.
- ▶ Pair with portfolio and timeline leaves for operating context.
- ▶ Pair with the operator dossier for corridor and portfolio context.

Source: ZAFTYS mix scaffold · native Typst (CeTZ donut)

9.10.1 Overview

Sinotrans - Operator metadata

Field	Detail
Company	Sinotrans
Headquarters	Beijing, China
Scale (context)	Multi-ten USD B China logistics franchise
Primary segments	Agency/freight forwarding, logistics, e-commerce
Geographic focus	Greater China core; selected international corridors
Strategic focus	China corridor density and agency network
Network posture	PRC ports/airports; Belt-and-Road adjacency

Source: ZAFTYS operator dossier (publishable synthesis)

BACKGROUND: Multi-ten USD B China logistics franchise. Primary operating regions: Greater China core; selected international corridors.

SUPPORTING STATISTICS: Physical intensity for Sinotrans is best read through mode-appropriate volume metrics (TEU, FTK, TKM, parcel density, or warehouse cube) alongside value share - not value share alone.

STRATEGIC IMPLICATIONS: Allocate diligence for Sinotrans to utilization, dwell, and contract tenure - then reconcile any sizing statements to the modeled exhibits that follow.

See Figure 58, Figure 57.

9.10.2 Financials

BACKGROUND: Sinotrans (Beijing, China) - Multi-ten USD B China logistics franchise. Key logistics segments: Agency/freight forwarding, logistics, e-commerce. [1] [2]

SUPPORTING STATISTICS: Volume diligence for Sinotrans should pair throughput metrics with dwell and exception rates so value share is not mistaken for operating intensity.

STRATEGIC IMPLICATIONS: Diligence focus is yield mix across Agency/freight forwarding, logistics, e-commerce, network utilization, and watchpoints (Agency vs logistics mix, cross-border e-commerce flows, and international partner alliances). [1] [2]

See Figure 56.

Global Logistics Market Sinotrans - Revenue Index

KEY VISUAL TAKEAWAYS

- ▶ 2025 reaches the peak directional index at 96.00.
- ▶ Read Global Logistics Market Sinotrans - Revenue Index as a diligence scaffold - not a filing-backed split.
- ▶ Pair with the operator dossier for corridor and portfolio context.

Source: ZAFTYS Data Bank model / verified claims.

9.10.3 Business Segments

BACKGROUND: Business segments for Sinotrans span Agency/freight forwarding, logistics, e-commerce. Geographic mix concentrates in Greater China core; selected international corridors. [1]

SUPPORTING STATISTICS: Attach products and network design follow the strategic focus: China corridor density and agency network. Portfolio reading: Agency/freight forwarding, logistics, e-commerce. [1]

STRATEGIC IMPLICATIONS: Operators competing with Sinotrans should map overlap on corridors where its network density is strongest (PRC ports/airports; Belt-and-Road adjacency). Moats (China port/airport agency density; domestic logistics reach; Belt-and-Road corridor positioning) should be stress-tested against risks (China trade-policy swings; SOE governance constraints; competition from global forwarders on multinational accounts). [1]

Sinotrans - Brand / service portfolio

Brand / service	Mode	Detail

9.11 Nippon Express

Nippon Express opens through the Overview subsection that follows, then market-share and size-path exhibits where modeled. The operating brief for Nippon Express is developed under Overview; this heading is the cut entry point only.

See Figure 61, Figure 60.

Global Logistics Market Nippon Express - Geographic Mix

SHARE BREAKDOWN

■ Asia Pacific	66%
■ Europe	14%
■ Americas	12%
■ Rest of World	8%

Source: ZAFTYS mix scaffold · native Typst (CeTZ donut)

KEY VISUAL TAKEAWAYS

- ▶ Asia Pacific leads the modeled mix at ~66%.
- ▶ Asia Pacific accounts for ~66% of the modeled geographic mix.
- ▶ Use Nippon Express geo mix to stress-test corridor exposure versus peer headlines.
- ▶ Directional prior - reconcile to filings when diligencing scale.
- ▶ Read Global Logistics Market Nippon Express - Geographic Mix as a diligence scaffold - not a filing-backed split.

Global Logistics Market Nippon Express - Segment Mix

KEY VISUAL TAKEAWAYS

- ▶ Japan logistics leads the modeled mix at ~44%.
- ▶ Read Nippon Express segment mix as a diligence scaffold - not a filing-backed split.
- ▶ Pair with portfolio and timeline leaves for operating context.
- ▶ Pair with the operator dossier for corridor and portfolio context.

Source: ZAFTYS mix scaffold · native Typst (CeTZ donut)

9.11.1 Overview

Nippon Express - Operator metadata

Field	Detail
Company	Nippon Express
Headquarters	Tokyo, Japan
Scale (context)	Multi-ten USD B NX Group
Primary segments	Japan logistics, global forwarding, heavy haul
Geographic focus	Japan core; expanding global NX brand footprint
Strategic focus	Japan domestic density + APAC forwarding
Network posture	Japan road/rail; global air/ocean stations

Source: ZAFTYS operator dossier (publishable synthesis)

BACKGROUND: Nippon Express is headquartered in Tokyo, Japan. Estimated scale: Multi-ten USD B NX Group. Primary operating regions: Japan core; expanding global NX brand footprint. [2]

SUPPORTING STATISTICS: Service portfolio centers on Japan logistics, global forwarding, heavy haul. Fleet / network posture: Japan road/rail; global air/ocean stations. [2]

STRATEGIC IMPLICATIONS: Strategic focus is Japan domestic density + APAC forwarding. Competitive positioning should be read alongside Chapter 3 share and matrix exhibits rather than as a filing-backed revenue split. [2]

See Figure 61, Figure 60.

9.11.2 Financials

BACKGROUND: Nippon Express (Tokyo, Japan) - Multi-ten USD B NX Group. Key logistics segments: Japan logistics, global forwarding, heavy haul. [2]

SUPPORTING STATISTICS: For Nippon Express, read absolute capacity (cube, TEU, TKM) next to modeled USD share; the two series diverge when yield and mix shift.

STRATEGIC IMPLICATIONS: Diligence focus is yield mix across Japan logistics, global forwarding, heavy haul, network utilization, and watchpoints (Overseas forwarding growth, Japan warehouse automation, and project cargo pipeline). [2]

See Figure 59.

Global Logistics Market Nippon Express - Revenue Index

KEY VISUAL TAKEAWAYS

- ▶ 2025 reaches the peak directional index at 95.90.
- ▶ Read Global Logistics Market Nippon Express - Revenue Index as a diligence scaffold - not a filing-backed split.
- ▶ Pair with the operator dossier for corridor and portfolio context.

Source: ZAFTYS Data Bank model / verified claims.

9.11.3 Business Segments

BACKGROUND: Business segments for Nippon Express span Japan logistics, global forwarding, heavy haul. Geographic mix concentrates in Japan core; expanding global NX brand footprint. [2]

SUPPORTING STATISTICS: Attach products and network design follow the strategic focus: Japan domestic density + APAC forwarding. Portfolio reading: Japan logistics, global forwarding, heavy haul. [2]

STRATEGIC IMPLICATIONS: Operators competing with Nippon Express should map overlap on corridors where its network density is strongest (Japan road/rail; global air/ocean stations). Moats (Japan domestic logistics density; heavy-haul / project cargo; APAC forwarding quality) should be stress-tested against risks (Japan demographic labor constraints; yen/FX translation; slower domestic volume growth). [2]

Nippon Express - Brand / service portfolio

Brand / service	Mode	Detail
Japan logistics	Core offering	Japan domestic density + APAC forwarding
global forwarding	Core offering	Japan road/rail; global air/ocean stations
heavy haul	Core offering	Attach / density play

Source: ZAFTYS operator dossier

Nippon Express - Moats vs risks

Dimension	Reading
Moats / strengths	Japan domestic logistics density; heavy-haul / project cargo; APAC forwarding quality
Key risks	Japan demographic labor constraints; yen/FX translation; slower domestic volume growth
Watchpoints	Overseas forwarding growth, Japan warehouse automation, and project cargo pipeline

Source: ZAFTYS operator dossier

9.11.4 Recent Developments

RECENT DEVELOPMENTS: Chronology for Nippon Express is shown in the Date | Type | Detail table below (publishable synthesis where bank news is thin). [2]

STRATEGIC IMPLICATIONS: Watchpoints remain Overseas forwarding growth, Japan warehouse automation, and project cargo pipeline; bind any investment thesis to moats (Japan domestic logistics density; heavy-haul / project cargo; APAC forwarding quality) versus risks (Japan demographic labor constraints; yen/FX translation; slower domestic volume growth). [2]

Nippon Express - Developments timeline

Date	Type	Detail
2022-2023	Network	Nippon Express: capacity and contract-logistics density investments aligned to Japan domestic density + APAC forwarding.
2023-2024	M&A / Product	Portfolio attach and automation/visibility products around core Japan domestic density + APAC forwarding.
2024-2025	Yield	Pricing and mix management under volatile ocean/air/parcel cycles; watch Overseas forwarding growth, Japan warehouse automation, and project cargo pipeline.
2025-2026	Risk	Execution against stated risks (Japan demographic labor constraints; yen/FX translation; slower domestic volume growth) remains the diligence overlay.

9.12 XPO

XPO opens through the Overview subsection that follows, then market-share and size-path exhibits where modeled. The operating brief for XPO is developed under Overview; this heading is the cut entry point only.

See Figure 63.

Global Logistics Market XPO - Segment Mix

SHARE BREAKDOWN

KEY VISUAL TAKEAWAYS

- ▶ LTL leads the modeled mix at ~57%.
- ▶ Read XPO segment mix as a diligence scaffold - not a filing-backed split.
- ▶ Pair with portfolio and timeline leaves for operating context.
- ▶ Pair with the operator dossier for corridor and portfolio context.

Source: ZAFTYS mix scaffold · native Typst (CeTZ donut)

9.12.1 Overview

XPO - Operator metadata

Field	Detail
Company	XPO
Headquarters	Greenwich, United States
Scale (context)	Multi-ten USD B LTL-focused franchise
Primary segments	LTL, brokered transportation adjacency
Geographic focus	United States and Canada LTL corridors
Strategic focus	North American LTL network modernization
Network posture	US/Canada LTL service centers

Source: ZAFTYS operator dossier (publishable synthesis)

BACKGROUND: XPO is headquartered in Greenwich, United States. Estimated scale: Multi-ten USD B LTL-focused franchise. Primary operating regions: United States and Canada LTL corridors. [2] [1]

SUPPORTING STATISTICS: Service portfolio centers on LTL, brokered transportation adjacency. Fleet / network posture: US/Canada LTL service centers. [2] [1]

STRATEGIC IMPLICATIONS: Strategic focus is North American LTL network modernization. Competitive positioning should be read alongside Chapter 3 share and matrix exhibits rather than as a filing-backed revenue split. [2] [1]

See Figure 63.

9.12.2 Financials

BACKGROUND: XPO (Greenwich, United States) - Multi-ten USD B LTL-focused franchise. Key logistics segments: LTL, brokered transportation adjacency. [1] [2]

SUPPORTING STATISTICS: Operating intensity in XPO is signaled by lane density and asset turns more than by headline market size - use physical KPIs beside the share exhibits.

STRATEGIC IMPLICATIONS: Diligence focus is yield mix across LTL, brokered transportation adjacency, network utilization, and watchpoints (LTL yield/ton, on-time service metrics, and technology-enabled door density). [1] [2]

See Figure 62.

Global Logistics Market XPO - Revenue Index

KEY VISUAL TAKEAWAYS

- ▶ 2025 reaches the peak directional index at 96.00.
- ▶ Read Global Logistics Market XPO - Revenue Index as a diligence scaffold - not a filing-backed split.
- ▶ Pair with the operator dossier for corridor and portfolio context.

Source: ZAFTYS Data Bank model / verified claims.

9.12.3 Business Segments

BACKGROUND: Business segments for XPO span LTL, brokered transportation adjacency. Geographic mix concentrates in United States and Canada LTL corridors.

[1] [2]

SUPPORTING STATISTICS: Attach products and network design follow the strategic focus: North American LTL network modernization. Portfolio reading: LTL, brokered transportation adjacency. [1] [2]

STRATEGIC IMPLICATIONS: Operators competing with XPO should map overlap on corridors where its network density is strongest (US/Canada LTL service centers). Moats (LTL network density and yield management tools; service center modernization) should be stress-tested against risks (LTL pricing cycles; industrial shipment softness; CapEx intensity of network upgrades). [1] [2]

10 Appendix

This appendix collects supporting definitions and reference materials for the Global Logistics Market study. Use the glossary for recurring terms and the references list for source attribution behind cited claims. Method notes and model bindings sit with the Data Bank version recorded in the report footer.

Glossary

- **ASP:** Average Selling Price.
- **CAGR:** Compound Annual Growth Rate - average annual growth rate over a multi-year horizon.
- **KPI:** Key Performance Indicator.
- **SKU:** Stock Keeping Unit - distinct sellable item.
- **ZAFTYS:** Institutional brand theme for ResearchOS market reports.
